| AIM OF THE WORK | 32 |

| | |
|---|-----------|
| EXPERIMENTAL | |
| Materials | 33 |
| Methods | 34 |
| Measurements | 41 |
| RESULTS AND DISCUSSION | |
| 1- Preparation of fire – retardant polymers | 48 |
| (i) Preparation of thiourea-formaldehyde resin | 48 |
| (ii) Preparation of unsaturated polyester resins | 50 |
| (iii) Reaction of unsaturated polyesters with styrene | 53 |
| (iv) Preparation of N-hydroxytetrabromophthalimide | 54 |
| (v) Preparation of N-methacryloyloxytetrabromophthalimide .. | 55 |
| (vi)Copolymerizations of methyl methacrylate with N-meth- acryloyloxyphthalimide and N-methacryloyloxytetrabro- mophthalimide. | 58 |
| 2-Improvement of white pine wood properties by impregnation with thiourea-formaldehyde resin and orthophosphoric acid .. | 60 |
| 3-Improvement of white pine wood properties by impregnation with unsaturated polyesters in admixture with styrene. | 65 |
| 4-Improvement of white pine wood properties by impregnation with mixtures of methyl methacrylate and phthalimide monomers, subsequent in situ copolymerization by free – radical initiator | 70 |
| 5-Improvement of white pine wood properties by impregnation with copolymers of various bromine content | 74 |
