Chapter 1.	Introduction	1
1-1.	literature survey on nimesulide	1
1-2.	literature survey on secnidazole	2
1-3.	literature survey on nifuroxazide	3
1-4.	literature survey on tinidazole	4
1-5.	literature survey on cinnarizine	5
1-6.	literature survey on chlorodiazepoxide	5
1-7.	basic principles of D-C polarography	6
1-8.	basic principles of cyclic voltammetric technique	7
1-9.	basic principles of stripping technique	8
Chapter 2.	Experimental	13
2-1.	Materials.....	13
2-2.	Preparations of solutions.....	14
2-3.	Analysis of drug tablets	16
	Preparation of serum	16
	Preparation of the drug serum solution	16
2-4.	Procedure of DC polarographic measurements	17
	Procedure of C.V measurements	17
	Procedure of CAdS voltammetry measurements	17
	Electrochemical polarographic measurements	
	Cells.....	18
	Electrochemical apparatus	18
	Pharmaceutical dosage forms	19
	Statistical analysis	19

Chapter 3. Results and Discussion

3-1.	Electrochemical behavior of nimesulide in B.R buffer solutions of different pH values	20
3-1.1.	DC polarography	20
3-1.1.i.	Current-potential curves	20
3-1.1.ii.	Effect of pressure at mercury height	21
3-1.1.iii.	Analysis of the polarographic waves	21
3-1.1.iv.	Half- wave potential ($E_{1/2}$) -pH curves.....	22
3-1.2.	Cyclic voltammetry	23
3-1.2.i.	Kinetic parameters of the electrode reaction	24
	The electrode reaction mechanism.....	25
3-1.3.	Cathodic adsorptive stripping voltammetry (CAAdSV) of nimesulide	27
3.1.3.i.	Effect of supporting electrolyte and pH	27
3.1.3.ii.	Effect of accumulation time and potential.....	28
3.1.3.iii.	Effect of scan rate	28
3.1.3.iv.	Effect of step height	28
3.1.3.vi.	Calibration graph of nimesulide	29
	Figures	31-42
	Tables	43-51
3-2.	Electrochemical behavior of secnidazole in B.R buffer solutions of different pH values	52
3-2.1.	DC polarography	52
3-2.1.i.	Current-potential curves	52
3-2.1.ii.	Effect of pressure at mercury height	52
3-2.1.iii.	Analysis of the polarographic waves	53
3-2.1.iv.	Half- wave potential ($E_{1/2}$) -pH curves.....	53

3-2. 2.	Cyclic voltammetry	53
3-2. 2.i.	Kinetic parameters of the electrode reaction	54
	The electrode reaction mechanism	55
3-2.3.	Cathodic adsorptive stripping voltammetry (CAAdSV) of secnidazole	56
3.2.3.i.	Effect of supporting electrolyte and pH	56
3.2.3.ii.	Effect of accumulation time and potential	56
3.2.3.iii.	Effect of scan rate	57
3.2.3.iv.	Effect of step height	57
3.2.3.v.	Calibration graph of secnidazole	57
	Figures	59-70
	Tables	71-79
3-3.	Electrochemical behavior of nifuroxazide in B.R buffer solutions of different pH values	80
3-3.1.	DC polarography	80
3-3.1.i.	Current-potential curves	80
3-3.1.ii.	Effect of pressure at mercury height	80
3-3.1.iii.	Analysis of the polarographic waves	81
3-3.1.iv.	Half- wave potential ($E_{1/2}$) -pH curves.....	81
3-3.2.	Cyclic voltammetry	81
3-3.2.i.	Kinetic parameters of the electrode reaction.....	82
	The electrode reaction mechanism	83
3-3.3	Cathodic adsorptive stripping voltammetry (CAAdSV) of nifuroxazide	86
3.3.3.i.	Effect of supporting electrolyte and pH	86
3.3.3.ii.	Effect of accumulation time and potential.....	86
3.3.3.iii.	Effect of scan rate	87
3.3.3.iv.	Effect of step height	87
3.3.3.v.	Calibration graph of nifuroxazide.....	87

Figures	89-100
Tables	101-111
3-4. Electrochemical behavior of tinidazole in B.R buffer solutions of different pH values	112
3-4.1. DC polarography	112
3-4.1.i. Current-potential curves	112
3-4.1.ii. Effect of pressure at mercury height	112
3-4.1.iii. Analysis of the polarographic waves	113
3-4.1.iv. Half- wave potential ($E_{1/2}$) -pH curves.....	113
3-4.2: Cyclic voltammetry	113
3-4. 2.i. Kinetic parameters of the electrode reaction.....	114
The electrode reaction mechanism	115
3-4.3. Cathodic adsorptive stripping voltammetry (CAAdSV) of tinidazole	116
3.4.3.i. Effect of supporting electrolyte and pH	116
3.4.3.ii. Effect of accumulation time and potential.....	116
3.4.3.iii. Effect of scan rate	117
3.4.3.iv. Effect of step height	117
3.4.3.iv. Calibration graph of tinidazole	117
Figures	119-130
Tables	131-139
3-5. Electrochemical behavior of cinnarizine in B.R buffer solutions of different pH values	140
3-5.1. DC polarography	140
3-5.1.i. Current-potential curves	140
3-5.1.ii. Effect of pressure at mercury height	140
3-5.1.iii. Analysis of the polarographic waves	141
3-5.1.iv. Half- wave potential ($E_{1/2}$) -pH curves.....	141
3-5. 2. Cyclic voltammetry	141

3-5. 2.i. Kinetic parameters of the electrode reaction.....	142
The electrode reaction mechanism	143
3-5.3. Cathodic adsorptive stripping voltammetry (CAdSV) of cinnarizine	144
3.5.3.i. Effect of supporting electrolyte and pH	144
3.5.3.ii. Effect of accumulation time and potential.....	144
3.5.3.iii. Effect of scan rate	145
3.5.3.iv. Effect of step height	145
3.5.3.v. Calibration graph of cinnarizine	145
Figures	147-158
Tables	159-168
3-6. Electrochemical behavior of chlorodiazepoxide in B.R buffer solutions of different pH values	169
3-6.1. DC polarography	169
3-6.1.i. Current-potential curves	169
3-6.1.ii. Effect of pressure at mercury height	169
3-6.1.iii. Analysis of the polarographic waves	170
3-6.1.iv. Half- wave potential ($E_{1/2}$) -pH curves.....	170
3-6. 2. Cyclic voltammetry	171
3-6.2.i. Kinetic parameters of the electrode reaction.....	171
The electrode reaction mechanism	172
3-6.3 Cathodic adsorptive stripping voltammetry (CAdSV) of chlorodiazepoxide	173
3.6.3.i. Effect of supporting electrolyte and pH	173
3.6.3.ii. Effect of accumulation time and potential.....	173
3.6.3.iii. Effect of scan rate	174
3.6.3.iv. Effect of step height	174
3.6.3.v. Calibration graph of chlorodiazepoxide	174
Figures	176-192

Tables	193-205
Summary	i-vi
