ACKNOWLEDGEMENT.	
SUMMARY.	
CHAPTER I : INTRODUCTION	1
I.1- Classification of Nuclear Models	1
a) The Single-Particle Shell Model	1
b) Unified Nuclear Model	6
I.2- Rotational Bands and their Crossing in deformed nuclei	9
I.3- Rotational Alignment, Backbending	12
I.4- The Cranked Shell Model	13
I.5- Simple Model for Backbending	20
I.6- The strength of Interaction Between Crossing Bands.	22
I.7- Collective and Effective Moments of Inertia.	23
I.8- Previous Works	25
I.9- Aim of the Work.	28
CHAPTER II : METHODS OF CALCULATIONS	29
II.1- Introduction	29
a) Broken Polynomial Expressions	30
b) Simple Model for Backbending.	32
II.2- Cranked Model Calculations	33
II.3- The Interaction Strength	36
CHAPTER III : RESULTS AND DISCUSSIONS.	39
III.1- The Predicted Energy Levels.	39
a) The Broken Polynomial Predictions	39
b) (VMI) Predictions	44
c) Moments of Inertia.	48

	Page
III.2- Cranked Shell Model Calculations	58
a) The Kinematical and Dynamical Moments of inertia $\mathcal{J}^{(1)}$ and $\mathcal{J}^{(2)}$	58
b) The aligned spin $i(\omega)$	64
III.3- The Strength of Interaction Between Crossing Bands.	69
CONCLUSION	71
REFERENCES.	72
