Abstract	
Chapter (1): Introduction	1
Chapter (2): Nonlinear viscous flow between two eccentric circular cylinders	10
2.1. Bipolar coordinates	10
2.2. Formulation of the problem	13
2.3. Method of perturbation	16
2.4. First-order approximation (Stokes flow)	18
2.4.1. Determination of the first-order velocity field $V_1(\xi, \eta)$	19
2.4.2. Determination of the first-order pressure field $P_1(\xi, \eta)$	19
2.5. Second-order approximation (nonlinear flow)	21
Chapter (3): Solution of the boundary value problem	23
3.1. Nonlinear flow in eccentric cylinders model	23
3.2. Determination of the Green's function	25
3.3. Determination of the function $\Psi_2^p(\xi, \eta)$	27
3.4. Determination of the second-order stream function $\Psi_2(\xi, \eta)$	29
3.5. Determination of the second-order velocity field $V_2(\xi, \eta)$	32
3.6. Determination of the second-order pressure field $P_2(\xi, \eta)$	32
Chapter (4): Flow analysis	35
4.1. Stokes flow	36
4.1.1. Streamline pattern $\Psi_1(\xi, \eta)$	36
4.1.2. Stagnation points	39

4.1.3. Separation points	41
4.1.4. Velocity distribution $V_1(\xi, \eta)$	45
4.1.5. Pressure distribution $P_1(\xi, \eta)$	48
4.2. Nonlinear flow	49
4.2.1. Streamline pattern $\Psi_2(\xi, \eta)$	49
4.2.2. Stagnation points	52
4.2.3. Velocity distribution $V_2(\xi, \eta)$	53
4.2.4. Pressure distribution $P_2(\xi, \eta)$	57
Chapter (5): Journal bearing applications	59
5.1. First-order surface traction $s_1(\xi, \eta)$	60
5.2. First-order force and torque	63
5.3. Second-order surface traction $s_2(\xi, \eta)$	66
5.4. Second-order force and torque	67
5.5. Fluid film force	70
5.6. Static characteristics	73
5.7. Reynolds number effects	75
Discussion	77
