Abstract	iii
 CHAPTER (1)	 1
FUNDAMENTALS OF PLASMA DISCHARGE	
1.1 Introduction	1
1.2 Plasma Generation	2
1.2.1 Plasma generation by beams	3
1.2.2 Plasma generation by electric field	3
1.3 Characteristic Curve of The Gas Discharge	9
1.4 General Description of The Glow Discharge	11
1.4.1 The cathode zone	13
1.4.2 The negative glow region	13
1.4.3 The faraday dark space region	14
1.4.4 The positive column region	15
1.5 Parameters Affect The Glow Discharge	15
1.5.1 The gas type and cathode material	16
1.5.2 The distance between electrodes	17
1.5.3 The gas pressure	17
1.5.4 The discharge current and voltage	17
1.6 Various Kinds of The Glow Discharge	18
1.6.1 The obstructed and constricted glow discharge	18

1.6.2 The spray discharge	18
1.6.3 The high pressure glow discharge	19
1.6.4 The hollow cathode discharge	19
1.6.5 The spherical and cylindrical glow discharge	20
1.7 Plasma Applications	21
1.8 Plasma Surface Modification	23
1.8.1 Oxidation	23
1.8.2 Surface cleaning and etching	24
1.8.3 Surface hardening	25
1.8.4 Surface modification of polymers	26

CHAPTER (2) 28

REVIEW OF THE PREVIOUS WORK

2.1 The Plane Glow Discharge Diagnostics	28
2.2 Electrostatic Confinement Using Glow Discharge (Virtual Anode)	31
2.3 Virtual Cathode Glow Discharge	35
2.4 Surface Modification of Polymers Using Plasma	39
2.5 The aim of the present work	45

CHAPTER (3) 46

EXPERIMENTAL SETUP AND DIAGNOSTIC TECHNIQUES

3.1 Introduction	46
3.2 The Discharge Vessel	46
3.3 The Vacuum System	48

3.4 The Electric Circuit of The System	48
3.5 The Single Probe Technique	50
3.5.1 The single probe circuit	50
3.5.2 The single probe theory	50
3.5.3 Determination of the plasma potential	55
3.5.4 Determination of electron energy distribution function	57
3.5.5 Determination of the electron temperature	59
3.5.6 Determination of the plasma density	59
3.6 The Double Probe Technique	61
3.6.1 The double probe circuit	61
3.6.2 The double probe theory	62
3.6.3 Determination of the electron temperature	64
3.6.4 Determination of the plasma density	66

CHAPTER (4) 67

ELECTROSTATIC CONFINEMENT USING DC COAXIAL CYLINDRICAL GLOW DISCHARGE (VIRTUAL ANODE)

4.1 Introduction	67
4.2 Electrical Characteristics	67
4.2.1 The current-voltage curve of the discharge	67
4.2.2 Effect of the pressure on the breakdown voltage	70
4.2.3 Radial distribution of plasma potential and electric field	72
4.3 Electron Energy Distribution Function	77
4.4 The Electron Temperature	84

4.4.1 Single probe measurements	84
4.4.2 Double probe measurements	90
4.5 The Plasma Density	95
4.5.1 Plasma density by the single probe	95
4.5.2 Plasma density by the double probe	96
4.5.3 Calculated plasma density	100
 CHAPTER (5)	106
DC COAXIAL VIRTUAL CATHODE GLOW DISCHARGE	
5.1 Electrical Characteristics	106
5.1.1 The current-voltage curve of the discharge	106
5.1.2 Radial distribution of potential and electric field	110
5.2 Electron Energy Distribution Function	114
5.3 The Electron Temperature	117
5.3.1 Single probe measurements	117
5.3.2 Double probe measurements	120
5.4 The Plasma Density	123
5.4.1 Single probe measurements	123
5.4.2 Double probe measurements	126
5.4.3 Calculated plasma density	128

CHAPTER (6)	133
SURFACE TREATMENT FOR POLYESTER USING DC CYLINDRICAL GLOW DISCHARGE	
6.1 Introduction	133
6.2 Types of Polymers	134
6.3 Nature of Polyesters	135
6.3.1 Polyester morphology	135
6.3.2 Polymer system of polyester	135
6.4 The Polyester Treatment System	137
6.4.1 Experimental setup	137
6.4.2 Material to be treated	137
6.5 Testing and Analysis	139
6.5.1 Mechanical properties	139
6.5.2 Water absorbency test	139
6.5.3 IR analysis	140
6.6 Experimental Results of Plasma Treatments	140
6.6.1 Mechanical properties	141
6.6.2 Water absorbency	144
6.6.3 IR Analysis	153
CHAPTER (7)	159
CONCLUSION
