

CONTENTS

	Page
I. INTRODUCTION.....	1
II. REVIEW OF LITERATURE.....	3
1. Seasonal abundance of predatory spiders.....	3
2. Seasonal abundance of <i>S. littoralis</i> (Boisd.), <i>A. craccivora</i> (Koch.), <i>A. gossypii</i> (Glover) and <i>T. urticae</i> (Koch.).....	10
3. Biological studies.....	14
4. Toxicity of some alternative pesticides on predatory spiders.....	15
5. Effect of some alternative pesticides on total protein and protein bands.....	17
III. MATERIAL AND METHODS.....	20
1. Seasonal abundance of the spiders and their preys during successive seasons of cotton and broad bean plants.....	20
A. Estimation of spider populations.....	20
B. Estimation of <i>S. littoralis</i> populations.....	20
C. Estimation of Aphids populations: <i>Aphis craccivora</i> in broad bean plants and <i>Aphis gossypii</i> in cotton plants.	21
D. Estimation of phytophagous mite populations.....	21
2. Biological studies.....	21
A. Spider's rearing.....	21
B. Spider's food.....	21
C. Prey's rearing.....	22
3. Toxicological of alternative pesticides.....	23
4. Biochemical studies.....	24
1. Tissue preparation.....	24

2. Determination of total protein.....	24
3. Separation of protein bands by electrophoresis (using SDS-PAGE).....	25
5. Statistical analysis.....	25
IV. RESULTS AND DISCUSSION.....	26
1. Ecological studies.....	26
1.1. Occurrence of spider families collected from broad bean and cotton crops.....	26
1.1.1. Occurrence of spiders families in Qaha Station.....	26
1.1.2. Occurrence of spiders families in Seds Station.....	31
1.2. The percentage of spider families and occurrence of their species their families during two successive years...	31
1.2.1. In Qaha Station (2003/2004).....	31
1.2.2. In Qaha Station (2004/2005).....	39
1.2.3. In Seds Station (2003/2004).....	42
1.2.4. In Seds Station (2004/2005).....	45
Seasonal abundance.....	49
1.3.1. Population density of predatory spider and their preys (<i>Spodoptera littoralis</i> , <i>Aphis craccivora</i> and <i>Tetranychus urticae</i>) which collected from broad bean plants at Qaha Station during two successive years (2003-2004) and (2004-2005).....	49
1.3.2. Population density of predatory spider and their preys (<i>Spodoptera littoralis</i> , <i>Aphis gossypii</i> and <i>Tetranychus urticae</i>) which collected from cotton plants at Qaha Station during two successive years (2004) and (2005).....	53
1.3.3. Population density of predatory spider and their	

preys (<i>Spodoptera littoralis</i> , <i>Aphis craccivora</i> and <i>Tetranychus urticae</i>) which collected from broad bean plants at Seds Station during two successive years (2003-2004) and (2004-2005).....	53
1.3.4. Population density of predatory spider and their preys (<i>Spodoptera littoralis</i> , <i>Aphis gossypii</i> and <i>Tetranychus urticae</i>) which collected from cotton plants at Seds Station during two successive years (2004) and (2005)).....	57
1.4. Association of spider families and preys on broad bean and cotton plants during two successive years (2003-2004) and (2004-2005) at two stations (Qaha and Seds).....	65
1.4.1. Association of spider families and preys on broad bean and cotton plants during (2003-2004) at Qaha Station.....	65
a) Broad bean.....	65
b) Cotton.....	65
1.4.2. Association of spider families and preys on broad bean and cotton plants during (2004-2005) at Qaha Station.....	69
a) Broad bean.....	69
b) Cotton.....	69
1.4.3. Association of spider families and preys on broad bean and cotton plants during (2004-2005) at Kaha Station.....	73
a) Broad bean.....	73
b) Cotton.....	73
1.4.4. Association of spider families and preys on broad	

bean and cotton plants during (2004-2005) at Seds Station.....	77
a) Broad bean.....	77
b) Cotton.....	77
1.5.Average number of spiders' predators and their families from broad bean and cotton plants during two successive years (2003-2004) and (2004-2205) at Kaha and Seds Stations	82
2. Biological studies.....	90
3. Toxicity of some alternative pesticides on adults (females and male).....	103
4.Biochemical study to investigate the effect of nutrition and alternative pesticide on total protein and protein bands in adult spiders.....	109
4.1. Total protein content.....	109
4.2. Refraction of protein patterns.....	109
4.2.1. The effect of treated the adult of (<i>T. abini</i>) with alternative pesticides on its protein bands molecular weight.....	112
4.2.2. Molecular weight of protein bands for adult (<i>T. abini</i>) which feeding on different prey.....	112
V. SUMMARY.....	123
VI. REFERENCES.....	127
