Introduction	7
1 Standard electroweak theory	11
1.1 Particle content in SM	11
1.2 Symmetries in particle physics	12
1.2.1 External Symmetry	13
1.2.2 Internal Symmetries	13
1.3 The gauge principle	14
1.4 Construction of the standard $SU(2) \times U(1)$ theory	15
1.5 Symmetry breaking via Higgs mechanism	17
1.6 Particle spectra and interactions in the unitary gauge	19
1.7 Neutral currents	22
1.8 Supersymmetry (SUSY)	22
1.8.1 The supersymmetry algebra and its representation	23
1.8.2 $N = 1$ Lagrangians	27
2 Fermion mixing in the standard model	30
2.1 Quark mixing in the standard model	30
2.2 Neutrino oscillations	32
2.3 Tri-bimaximal mixing	34

2.3.1	Experimental results	34
3	Flavor symmetry	37
3.1	A symmetry example, A_4	37
3.2	A_4 and mixing	40
3.2.1	Model of Nearly Degenerate Neutrino Masses	40
3.2.2	SUSY A_4 model and bimaximal mixing	42
3.2.3	Ma Model of tri-bimaximal mixing	47
3.3	Altarelli-Ferruccio SUSY A_4 model [7]	50
3.3.1	Vacuum alignment	53
3.3.2	See-saw realization	56
4	Quark mixing	58
4.1	T' Model of Quark Mixing	59
4.1.1	Outline of the T' model	60
4.1.2	Pattern of the symmetry breaking	61
4.1.3	leptons	62
4.1.4	Quarks	63
4.2	Outline of the proposed extension to Altraelli-Feruglio model .	67
	CONCLUSION	74
