List of Plates	VIII
<i>Introduction</i>	
<i>Chapter (I) Review of literature</i>	
-Cyanobacteria bioactive compounds.	3
<i>Spirulina</i> growth media.	4
- Effect of certain growth conditions on biomass production and antimicrobial activity of <i>Spirulina platensis</i>	6
- Effect of temperature	6
- Effect of Hydrogen ion concentration (pH)	7
- Effect of light intensity	8
- Effect of aeration	9
- Effect of different extraction solvents on antimicrobial activity of <i>Spirulina platensis</i>	10
-Economic importance of <i>Spirulina</i> sp.	12
<i>Chapter (II) Materials and methods</i>	
I) The culture media.	16
II) Reagents	19
- Preservation of <i>Spirulina platensis</i>	20
- The antimicrobial activity potentialities of <i>Spirulina platensis</i> .	20
- Maintenance of test organisms	21

Object	Page
- Determination of <i>Spirulina platensis</i> dry weight	22
- Preparation of cells extract.	22
- Determination of the best solvent for extraction of the antimicrobially active substance	22
-Effect of different phosphorus and nitrogen sources on algal growth	23
-Effect of certain factors on the growth and antimicrobial activity of <i>Spirulina platensis</i>	23
A) Determination of the effect of incubation temperature on growth and antimicrobial activity of <i>Spirulina platensis</i> .	23
B) Determination of the effect of hydrogen ion concentration (pH) on growth and antimicrobial activities	24
C) Effect of light intensity on growth and antimicrobial activities	24
D) Effect of aeration on growth and antimicrobial activities	24
E) Effect of light duration on growth and antimicrobial activities.	25
- Production, extraction, purification and identification of the antimicrobial material produced by <i>Spirulina platensis</i>	25
- Production of antimicrobial substance:	25
- Extraction of the antimicrobial substance	25
- Purification of the antimicrobial material	26
- The physicochemical characters of the purified fraction	27
- Spectroscopic analysis of antimicrobial material	27

Object	Page
- Behaviour of the active compound towards differed chemical reactions	28
- Determination of minimal inhibitory concentration (MIC) and minimal cidal concentration (MCC) of the product	31
- Biochemical composition of <i>Spirulina platensis</i> .	32
Chapter (III) Results	
- <i>Spirulina platensis</i> growth curve	35
-Effect of different nitrogen and phosphorus sources on biomass production of <i>S. platensis</i> .	35
-Screening of antimicrobial substance produced by <i>Spirulina platensis</i> using different solvents.	38
-Effect of some culture conditions on biomass production (mg dry wt./100 ml) of <i>Spirulina platensis</i> and its antimicrobial activity	41
- Effect of different cultivation temperatures on biomass production.	41
- Effect of different cultivation temperatures on antimicrobial activities of whole culture (cells and exo-metabolites in medium).	41
- Effect of different cultivation temperature on antimicrobial activities of <i>Spirulina platensis</i> culture filtrate	45
- Effect of different cultivation temperature on antimicrobial activities of <i>S. platensis</i> extracted cells	45

Object	Page
- Effect of different hydrogen ion concentrations (pH) on biomass production of <i>Spirulina platensis</i> .	50
- Effect of different hydrogen ion concentrations (pH) on antimicrobial activities of <i>Spirulina platensis</i> whole culture (cells and exometabolites).	52
- Effect of different hydrogen ion concentrations (pH) on antimicrobial activities of <i>Spirulina platensis</i> culture filtrate .	55
- Effect of different hydrogen ion concentrations (pH) on antimicrobial activities of <i>Spirulina platensis</i> extracted cells.	58
- Effect of different light intensities (Klux) on biomass production resulted from <i>Spirulina platensis</i> (mg dry wt./100ml).	61
- Effect of different light intensities (Klux) on antimicrobial activities of <i>S. platensis</i> whole culture (cells and exometabolites)	61
- Effect of different light intensities (Klux) on antimicrobial activities of <i>Spirulina platensis</i> culture filtrate.	65
- Effect of different light intensities on antimicrobial activities of <i>Spirulina platensis</i> cells extract.	68
- Influence of aeration on biomass production of <i>Spirulina platensis</i> (mg dry wt./100ml).	71
- Influence of aeration on antimicrobial activities of <i>Spirulina platensis</i> whole culture (cells and exometabolites)	71

Object	Page
- Influence of aeration on antimicrobial activities of <i>Spirulina platensis</i> culture filtrate.	74
- Influence of aeration on antimicrobial activities of <i>S. platensis</i> cells extract.	74
- The effect of light duration on biomass production of <i>Spirulina platensis</i> (mg dry wt./100ml)	77
- Effect of light duration on antimicrobial activities of <i>S. platensis</i> whole culture (cells and exometabolites)	77
- Effect of light duration on antimicrobial activity of <i>S. platensis</i> culture filtrate	80
- Effect of light duration on antimicrobial activities of <i>Spirulina platensis</i> cells extract.	82
- The antimicrobial potentialities of the purified antibiotic produced by <i>Spirulina platensis</i> .	84
- Characterization of the antimicrobial substance produced by <i>Spirulina platensis</i> .	85
- Physical properties	85
- Spectroscopic analysis.	85
Chapter (IV) Discussion	97
Chapter (V) Summary and Conclusion	105
Chapter (VI) Reference	108
Chapter (VII) Arabic Summary	1
