Arabic summary	

LIST OF TABLES

Table No.	Table	Page
Table I	Objective + subjective symptoms of EPH gestosis	10
Table II	Risk factor for EPH gestosis and subjects rating at the weight of supporting evidence	12
Table 1	The maternal age of three groups	69
Table 2	The gestational age of three groups.	70
Table 3	The infant birth weight of the three groups.	71
Table 4	Apgar score at one minute of the three groups.	72
Table 5	Apgar score at five minute of the three groups.	73
Table 6	Diastolic blood pressure of the three groups.	74
Table 7	The correlation coefficient (r) between serum Homocysteine and different clinical variable in patients with toxemia of pregnancy.	75
Table 8	Mean + S.D., t test & p values of maternal age, GA, IBW, Apgar score at 1, 5 minute & DBP in mild pre-eclampsia, eclampsia compared with the control group.	76
Table 9	Serum homocystein level of the three groups.	77
Table 10	Correlation coefficient (r) between serum homocysteine level and severity of hypertension in patients with mild pre-eclampsia and eclampisa.	78
Table 11	Correlation coefficient (r) between serum homocysteine level and severity of edema in patients with mild pre-eclampsia and eclampisa.	79
Table 12	Relation between serum homocysteine level and severity of proteinuria in patients with pre-eclampsia & eclampsia.	80
Table 13	Diagnostic validity test	81
Table 14	The serum homocysteine level and lipid profile in mild pre-eclampsia, eclampsia compared with the control group	82
Table 15	Correlation coefficient (r) between serum homocysteine level and different lipid profile in patients with toxacima of pregnancy.	83

LIST OF FIGURES

Fig. No.	Fig.	Page
Fig. 1	Prostaglandin synthesis.	31
Fig. 2	Homocysteine, a demethylated derivative of methionine	35
Fig. 3	Pathway of Homocysteine synthesis & metabolism.	36
Fig. 4	Coenzymes derived from vitamin B ₁₂ .	37
Fig. 5	Methionine synthesis. The methyl group is derived from the 5-methyltetrahydrofolate.	38
Fig. 6	Catabolic pathway of Homocysteine.	40
Fig. 7	The mean age of patients in study group I & study group II and control group.	69
Fig. 8	The mean gestational age in study group I & study group II and control group.	70
Fig. 9	The mean infant birth weight in study group I & study group II and control group.	71
Fig. 10	The mean Apgar score at 1 minute in study group I & study group II and control group.	72
Fig. 11	The mean Apgar score at 5 minutes in study group I & study group II and control group.	73
Fig. 12	Mean diastolic blood pressure in study group I & study group II and control group.	74
Fig. 13	Mean serum homocysteine in study group I & study group II and control group.	77
Fig. 14	Homocysteine and severity of hypertension in study group I & study group II.	78
Fig. 15	Homocysteine and severity of edema in study group I & study group II.	79
Fig. 16	ROC plot for homocysteine to discriminate between patients and control.	81

LIST OF ABBREVIATIONS

ACOG	:	American colleague of obstetric and gynecology
AT III	:	Antithrombin III
BL.Pr.	:	Blood pressure
CE	:	Cholesterol esterase
CHD	:	Congenital heart diseases
Co _x	:	Cholesterol oxidase
DBP	:	Diastolic blood pressure
EDD	:	Expected date of delivery
G.A.	:	Gestational age
Hcy	:	Homocystiene
IBW	:	Infant birth weight
IL-6	:	Interleukin-6
LCF	:	Lipid clearing factor
LMP	:	Last menstrual period
MTHFR	:	Methylentetrahydrofolate reductase
MTX	:	Methotrexate
PG	:	Prostaglandin
PG1	:	Prostaglandin I
SAH	:	S. adenosyl homocysteine
SAM	:	S. Adenosyl methionine
STBM	:	Syncytiotrophoblast microvellaus membranes
THcy	:	Total homocystiene
TH	:	Tetrahydrofolat
TNF.α	:	Tumour necrosis factor α
TSSHP	:	International society for the study of hypertension of pregnancy
TXA2	:	Thromoxan A2
