

Results and Comments
on the Results.

The results obtained in this work shows about 120 cases from the 150 cases i.e about (80%) are breast feeding, about 10 cases only are atificially feeding i.e about 7% and only about 13% of the cases are mixed feeding. Nearly, all childs and infants except few cases have the different nutritional diseases problems in the form of delyed theething, sitting alone, creeps, walking and rickets. This is due to ignorance of the mothers about the healthy nutrintional habites and knowledges. All of them nearly depends on rice water and rice itself as an external diet for the baby and not give their baby other foods like egg yolk, cheese, vegetable soup and fresh juices like oranges and lemonades .
