Content	Page
Holly Quraan	I
Acknowledgments	II
Contents	III-VII
List of tables	VIII
List of charts	IX
List of figures	X-XVI
Chapter 1 Historical review & Development ..	1-4
Historical review	1
Development	1-4
Chapter 2 Reaming of long bones	5-21
Systemic effect of reaming	5
Fat embolism syndrome	5
Local effects of reaming	8
Autografting	8
Distribution of cortical reamings	9
Viable osteoblastic potential of cortical reamings	10
Compartment syndrome	13
Cortical reaming	13
Heat necrosis	15
Frölke's Recommendations	18
Technique of reaming	21

Chapter 3 Material used for intramedullary

nails	22-49
Implant alloys and interfacial engineering	22
The nature of in vivo loading	22
General requirements of implant material	25
Implant materials	26
Chemical composition	27
Implant Steel	27
Titanium and its alloys	28
Cobalt-Chromium alloys	29
Mechanical characteristics of implant material	29
Mechanical behavior under static load	30
Definitions of standard terms	33
Material properties	33
Implant properties	35
Mechanical behavior under dynamic load	37
Corrosion	40
Titanium surface modifications	42
Non-Anodised titanium surface	42
Anodisation type II	42
Anodisation type III	44
Properties of different anodized surfaces	45

Chapter 4 Most recent advances **50-78**

- (A) Hydraulically expandable nailing in the treatment of long bone fractures and pseudoarthrosis 50-57
 - Introduction 50
 - Technique 53
- (B) A fully implantable, programmable distraction nail (Fitbone)- new perspectives for corrective and reconstructive limb surgery 58-71

System for callus distraction-overview	58
The Albizzia intramedullary nail	59
The intramedullary skeletal kinetic distractor nail	60
The Fitbone system	60
The Fitbone SAA nail	62
The Fitbone TAA nail	63
Indications and surgical techniques	64
Femur antigrade	65
Femur retrograde	66
Tibia antigrade	68
Femur and tibia simultaneously	68
Bone transport at the femur	69
 (C) Plasma polymer- high- porosity silver composite coating for infection prophylaxis in intramedullary nailing	72-78
Plasma polymerisation coating techniques	74
Plasma polymers containing metal particles ...	74
Antimicrobial activity of silver-coated implants	76
 Chapter 5 Review of existing, mounted targeting devices for distal locking of intramedullary nails	79-87
The modern interlocking nail	79
Other fixation/locking system	82
Existing mechanical jigs	83
Problem related to distal locking	86
The future	87
 Chapter 6 fluoro-navigation	88-94
Navigation technology	88

Principle of fluoro-navigation	89
Future chalange	94
Patients and Methods	95-127
Patient distribution according to age	95
Patient distribution according to sex	96
Anatomical distribution of fracture	97
Type of fracture	98
Types of nail used	102
Abbreviations of the excel sheet	104
Excel sheet	106-112
Methods	113-127
Light source	113
Fiberoptic cable	115
Description of the technique	116
Results and analysis of the results	128-138
Time of technique	128
Length of incision	129
Radiation exposure	130
Analysis of the results according to fractured bone	131-133
Humeral results	131
Tibial results	132
Femoral results	133
Analysis of the results according to measured data	134-138
Duration results	134
Incision length results	136
Radiation exposure results	137

Discussion	139-148
Conclusion	149
Summary	150-151
References	152-159
