INTRODUCTION	1
AIM OF THE STUDY	5
REVIEW OF LITERATURE	
Gynecological operation	6
Definition and types of wound	6
Wound physiology	10
Wound histology	13
Wound biochemistry	14
Wound healing	16
Factors Predisposing to wound infection	21
Virulence factors and host responses	36
Types of micro-organisms which related to post-operative wound infection	40
Diagnosis of organisms in postoperative wound infection	41
Formation and composition of honey	45
Benefit of honey	45
Comfort of honey dressings	55
Nursing role management for acceleration of wound healing	59
Preoperative treatment	60
Intraoperative treatment	63
Prevention of postoperative wound infection	63
Infection control Program	80
