I. INTRODUCTION.....	1
II. REVIEW OF LITERATURE.....	3
I. The physical and chemical characteristics of wheat kernels, flour and pasta.....	4
I.1. The physical characteristics of wheat kernels.....	5
I.1.1. vitreous and mealy characters.....	5
I.1.2. Hard and soft characteristics.....	6
I.1.3. Strong and weak character.....	6
I.1.4. Grain size and shape	7
I.1.5. Moisture content.....	8
I.2. The chemical composition of wheat kernels , flour and pasta.....	9
I.2.1. The carbohydrates of wheat kernels and flour.....	9
I.2.1.1. The starch.....	9
I.2.1.2. The sugars of wheat kernels and flour.....	11
I.2.1.3. Effect of amylases enzymes on starch.....	12
I.2.2. The proteins of wheat and wheat products	15
I.2.2.1. Protein content of wheat and wheat products.....	15
I.2.2.2. Wheat protein fractions.....	17
I.2.2.3. Gluten content of wheat protein	20
I.2.3. Lipids and pigments content of wheat and wheat products.....	23

	<u>Page</u>
1.2.3.1. Fats and fatty acids content...	23
1.2.3.2. Pigments content of wheat and wheat products.....	26
1.2.4. Minerals and ash content.....	29
II.2. Wheat conditioning.....	34
II.3. Pasta brownness.....	39
II.4. Pasta cooking quality.....	44
II.5. High fiber bread.....	49
II.5.1. Occurrence and distribution of phytic acid in wheat kernels.....	53
II.5.2. Nutritional considerations.....	55
II.5.3. Factors affecting phytic acid during bread making.....	56
III- MATERIALS AND METHODS.....	61
III.1. Materials.....	61
III.1.1. Wheat varieties.....	61
III.1.2. Flour and pasta.....	61
III.1.3. High fiber bread.....	62
III.2. Methods.....	62
III.2.1. Physical characteristics.....	62
III.2.1.1. Hectolitre weight.....	62
III.2.1.2. 1000 kernel weight.....	62
III.2.1.3. Vitreous percentage.....	62
III.2.1.4. Moisture content.....	62

III.2.2. Chemical analysis.....	63
III.2.1. Ash and mineral contents.....	63
III.2.2.1. Carbohydrates.....	63
III.2.2.1. Sugars and starch	63
III.2.2.2. Crude fibers.....	63
III.2.2.3. Lipids.....	63
III.2.2.4. Protein and gluten.....	63
III.2.2.5. Pigments content.....	64
III.2.2.6. Brownness.....	66
III.2.2.7. Grade colour figure.....	66
III.2.2.8. Falling number values (Alpha - amylase activity).....	66
III.2.2.9. Available lysine content.....	67
III.3. Rheology properties.....	68
* Farinogram.....	68
* Extensogram.....	68
III.4. Pasta cooking quality.....	68
III.5. Pasta model systems.....	68
III.6. High fiber bread.....	68
III.6.1. Red shorts bread.....	68
III.6.2. Incubation treatments of shorts.....	69
III.6.3. Total calories calculation.....	69
III.6.4. Phytic acid determination.....	70

IV- RESULTS AND DISCUSSION.

IV.1. Physical and chemical characteristics of wheat, flour and pasta.....	71
IV.1.1. Physical characteristics of different wheat varieties	71
IV.1.2. Chemical constituents of wheat and their effect on flour quality.....	73
IV.1.2.1. Moisture ash and fiber contents	73
IV.1.2.2. Protein content.....	77
IV.1.2.2.1. Protein and gluten contents..	77
IV.1.2.3. Carbohydrates content of different wheat varieties : kernels, flour and semolina...	83
IV.1.2.3.1. Reducing, non-reducing and total sugars.....	83
IV.1.2.3.2. Starch contents.....	85
IV.1.2.3.3. Alpha-amylase activity.....	86
IV.1.2.4. Lipids and pigments content of different wheat varieties kernels, flour and semolina...	87
IV.1.2.4.1. Lipids content.....	87
IV.1.2.4.2. Pigments content.....	87
IV.II. Effect of conditioning lying time.....	90
II.1. Effect of conditioning lying time on triticum durum, Egyptian stork's.....	90
II.1.1. Effect of conditioning on flour yield and flour chemical composition.....	90

II.1.2. Effect of conditioning on rheological properties.....	94
II:2.Effect of conditioning lying time on triticum aestivium, Australian wheat.....	98
II.2.1. Effect of conditioning on flour yield and its chemical composition...	99
II.2.2. Effect of conditioning on rheological properties.....	100
III- Pasta browning.....	103
III.1. Factors affecting pasta brownness.....	105
III.1.1. Varietal.....	105
III.1.2. Bran contamination.....	106
III.1.3. Enzymatic reaction.....	107
III.1.4. Non-enzymatic reaction (Maillard reaction).....	108
IV- Pasta quality.	
IV.1. Rheological properties of different commercial macaroni samples.....	109
IV.2. Cooking quality of different commercial macaroni samples.....	112
IV.3. Improvement of pasta quality processed from T. aestivium and Egyptian durum stork's.....	115
IV.3.1. Effect of ascorbic acid addition on pasta colour.....	115
IV.3.2. Effect of wheat germ addition on pasta colour.....	117

	<u>Page</u>
IV.3.3. Addition effect of ascorbic acid and wheat germ on pasta colour.....	119
IV.4. Rheological properties of pasta model systems....	121
IV.4.1. Effect of wheat germ processed addition on farinogram.....	121
IV.4.2. Effect of ascorbic acid addition on farinogram.....	124
IV.4.3. Effect of ascorbic acid and wheat germ addition on farinogram.....	124
IV.5. Cooking quality of pasta model systems.....	127
V- High Fiber Bread.....	130
V.1. Chemical constituents of commercial bread and low calories bread.....	130
V.2. Distribution of phytate, fiber and ash contents of red and white kernels and their milling products..	133
V.3. Factors affecting phytate hydrolysis.....	135
V.3.1. Wheat shorts incubation.....	136
V.3.2. Effect of toasting on phytate phosphorous loss.....	136
V.3.3. Effect of yeast addition, shorts incubation, ascorbic acid addition and toasted treatment on phytate hydrolysis.....	139
V.4. Rheological properties of samples dough under investigation.....	142
V.4.1. Farinogram test.....	142

V.4.2. Extensigram.....	142
v.5. Nutritional constituents.....	147
