

CONTENTS

Item	Page
1. Introduction	1
Aim of study	3
2. Review of Literature	4
2.1. Chemical composition of raw material used in this work	4
2.1.1. Yellow corn grits	4
2.1.2. Potatoes tubers	5
2.1.3. Chemical composition of potatoes flour	6
2.1.4. Chemical composition of rice flour	7
2.1.5. Soft wheat flour	8
2.1.6. Chemical composition of dairy products	9
2.1.6.1. Sweet whey powder	9
2.1.6.2. Skimmed milk powder	10
2.1.6.3. Chemical composition of soy milk	10
2.2. Yellow corn flour in bakery products	10
2.3. Yellow corn flour in cereal products	12
2.4. Dried potatoes in food products	15
2.4.1. Processed potatoes	15
2.4.2. Dehydrated sliced potatoes	16
2.4.3. Dehydrated mashed potatoes	16
2.4.4. Potatoes granules	16
2.4.5. Potatoes in bakery products	16
2.4.6. Potatoes flour in breakfast cereals	19
2.5. Use rice flour	21
2.6. Dairy products in cereal products	24
2.6.1. Use skimmed milk powder and sweet whey powder in cereal products	24

2.6.2. Use soy milk in cereal products	27
2.7. Effect of extrusion - cooking on the physical characteristics of the raw materials	28
2.7.1. Water absorption index(WAI), water solubility index (WSI)	28
2.7.2. Bulk density	31
3. Materials and Methods	33
3.1. Materials	33
3.1.1. Wheat flour (72% extraction rate)	33
3.1.2. Yellow corn	33
3.1.3. Rice	33
3.1.4. Potato tubers	33
3.1.5. Skim milk powder	33
3.1.6. Sweet whey powder	33
3.1.7. Soy Milk (Full Fat Soy milk powder)	33
3.2. Methods	34
3.2.1. Preparation of rice flour and yellow corn flour	34
3.2.2. Preparation of dehydrated potato samples	34
3.2.3. Preparation of material to extruding	34
3.2.3.1. Milling of raw materials	34
3.2.3.2. Adjusting the moisture content of the sample before extrusion	35
3.2.3.3. Preparation of extrudats blends	35
3.2.3.4. Experimental design of extruder	36
3.2.3.5. Extrusion procedure	37
3.2.4. Preparation of chips blends	38
3.2.5. Preparation of Biscuit blends	39
3.2.6. Chips preparation	40
3.2.7. Biscuits (Marie biscuits) preparation	40

3.2.8. Saple' Preparation	41
3.3. Chemical analysis	41
3.3.1. Determination of moisture content	42
3.3.2. Determination of total protein content	42
3.3.3. Determination of total lipids content	42
3.3.4. Determination of ash content	43
3.3.5. Determination of Total fiber	43
3.3.6. Determination of total carbohydrates content	43
3.4. Physical properties of the extrudats	44
3.4.1. Water absorption	44
3.4.2. Water absorption index (WAI) and water solubility index (WSI)	44
3.4.3. Bulk density (BD)	45
3.5. Physical characteristics of Marie biscuits	45
3.6. Sensory evaluation of products	46
3.6.1.Sensory evaluation of chips	46
3.6.2. Sensory evaluation of the extruded products	46
3.6.3. Sensory evaluation of bakery products	47
3.7.Statistical analysis	47
4. Results and Discussion	48
4.1. Milling of cereals	48
4.2. Dehydration of tuber potatoes	48
4.3. Physical properties of raw material	49
4.4. Chemical composition of cereal	51
4.5. Chemical composition of raw potatoes and potatoes flour	54
4.6. Chemical composition of dairy products	57
4.7. Chemical and physical properties of products	60
4.7.1. Snack food	60

4.7.1.1. Physical properties of snacks	60
4.7.1.2. Chemical composition of snack food	63
4.7.1.3. Sensory evaluation of snacks	68
4.8. Chemical composition of chips	75
4.8.1. Effect of storage period on chips quality	80
4.8.2. Sensory evaluation of chips	84
4.9. Physical properties of biscuits	92
4.10. Chemical composition of biscuits	96
4.11. Sensory evaluation of biscuits	101
4.12. Chemical composition of saplé	105
4.13. Sensory evaluation of saplé	110
5. Summary	114
6. References	126
