

## CONTENTS

	PAGE
1. INTRODUCTION.....	1
2. REVIEW OF LITERATURE.....	3
2.1. Stereochemistry of steroids.....	4
2.1.1. Configuration of sterol nucleus.....	9
2.1.2. Configuration of substituent groups in sterols.....	10
2.2. Sterol and hydrocarbon contents of some vegetable oils.....	13
2.2.1. Effect of refining processes on sterols and hydrocarbons of edible oils.....	15
2.2.2. Effect of heating at deep-fat frying on sterol content of edible oils.....	18
2.3. Effect of sterols on the rate of deterioration of heated edible oils.....	24
2.4. Effect of refining and frying processes on the physicochemical properties and fatty acid composition of some edible oils.....	26
2.4.1. Effect of different technological processes on fatty acid composition of some edible oils.....	30
2.4.2. Effect of heating at deep-fat frying on fatty acid composition of edible oils.....	33
2.5. Effect of dietary fats nutrition on egg performance, its cholesterol content and lipid composition in egg yolk and serum.....	34
2.5.1. Egg performance and quality.....	34
2.5.2. Cholesterol and total lipids content of egg yolk.....	36
2.5.3. Effect of dietary fats on cholesterol content and lipid concentration of laying hens serum.....	39
2.5.3.1. Cholesterol content.....	39
2.5.3.2. Total lipids and triglycerids content.....	43
2.5.3.3. Phospholipids.....	45

	Page
<b>3. MATERIALS AND METHODS.....</b>	46
3.1. Materials.....	46
3.1.1. Cottonseed oil.....	46
3.1.2. Soybean oil.....	46
3.1.3. Corn oil.....	46
3.1.4. Sunflower oil.....	46
3.1.5. Olive oil.....	46
3.1.6. Wheat germ.....	46
3.1.7. Authentic sterols and butylated hydroxy- toluene.....	47 47
3.2. Experimental methods.....	47
3.2.1. Physical and chemical properties of oils.....	47
3.2.1.1. Refractive index.....	47
3.2.1.2. Acid value, peroxide value, saponification value, unsaponifiable matter and conjugated diene fatty acids.....	47 47
3.2.1.3. Determination of benzidine number.....	47
3.2.2. Identification and determination of fatty acids and unsaponifiable matter composition of oils.....	47 47
3.2.2.1. Methylation.....	47
3.2.2.2. Determination of fatty acids by GLC.....	48
3.2.2.3. Determination of the unsaponifiable composition by GLC.....	49 49
3.2.3..Deep fat frying of cottonseed, soybean and corn oils.....	50 50
3.2.3.1. Estimation of sterols in heated oils by GC-MS methods.....	50 50
3.2.4. Using of plant sterols as antioxidant.....	51
3.3. Nutritional experiments.....	51
3.3.1. Egg yolk sample.....	53
3.3.2. Blood plasma samples.....	53
3.3.3. Egg analysis.....	54
3.3.3.1. Total lipid and the dry matter.....	54
3.3.3.2. Total and free cholesterol.....	54

	Page
3.3.4. Serum analysis.....	54
3.3.4.1. Total lipids.....	54
3.3.4.2. Determination of total and free cholesterol	54
3.3.4.3. Determination of triglycerides.....	55
3.3.4.4. Determination of phospholipids.....	55
3.3.5. Statistical analysis of data.....	55
<b>4. RESULTS AND DISCUSSION.....</b>	<b>56</b>
4.1..Effect of technological processes of edible oils on its physicochemical properties.....	56
4.2. Effect of technological processes on hydrocarbons and sterols content of edible oils.....	59
4.2.1. Cottonseed oil.....	59
4.2.2. Soybean oil.....	62
4.2.3. Corn, sunflower and olive oils.....	65
4.3. Effect of deep-fat frying temperature on physicochemical properties of cottonseed, soybean and corn oils.....	67
4.3.1. Effect of heating at 180±10°C on fatty acids composition of cottonseed, soybean and corn oils.....	73
4.3.1.1. Cottonseed oil.....	73
4.3.1.2. Soybean oil.....	76
4.3.1.3. Corn oil.....	78
4.3.2. Fragmentation of standard sterols by GC-MS and in cottonseed oil after heated treatment	81
4.3.2.1. Standard sterols.....	81
4.3.2.2. Cottonseed oil.....	88
4.4. Effect of plant sterols as antioxidant on the rate of deterioration of heated cottonseed oil.....	99
4.5. Dietary oils nutrition related to egg performance, cholesterol and total lipid contents of egg yolk and serum.....	109
