

# *Contents*

	Page
1. Introduction.	I
2. Review of literature.	2
2.1. Sandstone's and sands.	2
2.2. Environments of sandy deposition.	3
2.3. Sandy soils in Egypt.	5
2.4. Factors affecting the formation of sandy soils in Egypt.	7
2.5. Characteristics of sandy soils.	16
2.6. Classification of sandy soils.	18 —
2.7. Trace elements in soils.	19
2.8. Grain size parameters.	26
2.9. Uniformity, maturity and source rocks.	29
2.10. Mineralogy of clay fraction.	33
3. Materials and methods.	37
3.1. Field studies.	37
3.2. Laboratory studies.	39
3.2.1. Chemical analyses.	39
3.2.2. Mineralogical analyses.	42
4. Results and discussion.	45
4.1. Properties of the studied soils.	45
4.1.1. Particle size distribution.	45
4.1.2. Calcium carbonate.	51
4.1.3. Gypsum content.	53
4.1.4. Organic matter content.	53

---

	PAGE
4.1.5. Soil salinity.	54
4.1.6. Soil reaction.	59
4.1.7. Soluble cations and anions.	61
4.1.8. Cation exchange capacity (CEC).	63
4.1.9. Exchangeable cations.	66
4.1.10. Amorphous inorganic materials.	67
4.1.11. Trace elements.	72
4.2. Mineralogical properties of the studied sandy soils.	102
4.2.1. Grain size parameters.	102
4.2.2. Mineralogy of sand fraction.	133
4.2.2.1. Mineralogy of heavy minerals.	133
4.2.2.2. Mineralogy of light minerals.	144
4.2.2.3. Uniformity, maturity and source rocks of soil materials.	149
4.2.3. Mineralogy of clay fraction.	158
4.3. Evaluation of land characteristics.	168
5. Summary and conclusions.	173
6. References.	181
Appendix.	195
Arabic Summary.
