

## CONTENTS

	Page
INTRODUCTION .....	1
MATERIALS AND METHODS .....	7
Ecological Studies .....	8
Environmental conditions .....	8
Vegetation analysis .....	9
Eco-physiological Studies .....	10
Water saturation deficit (W.S.D.).....	10
Water content .....	10
Metabolic products .....	11
Determination of chloroplastic pigments .....	11
Ash content .....	12
Determination of some macro-micro nutrient elements .....	12
Crude fibers .....	13
RESULTS AND DISCUSSION .....	14
Ecological Studies .....	14
- Location of the studied area .....	16
- Topography .....	16
I- Climatic factors.....	16
II- Edefic Factors .....	26
- Soil mechanical analysis .....	27

	Page
- Soil chemical analysis .....	30
- Soil moisture contents .....	32
III- Phyto-population List In The Study Areas ....	36
- Class dicotyledoneae .....	37
- Class monocotyledoneae.....	38
IV- Macromorphology of Phyto-population .....	39
- Species in the studies areas and their phenology .....	39
- Calligonum comosum .....	39
- Polycarpaea repens .....	49
- Bassia muricata .....	62
- Cornulaca monacatha .....	71
- Eremobium aegyptiacum .....	81
- Neurada procumbens .....	90
- Monsonia Nivea .....	100
- Moltkiopsis ciliata .....	118
- Senocia disfontianei .....	121
- Ifloga spicata .....	129
- Cotula cinerea .....	135
- Reichardia tingitana .....	147
- Launaea mucronata .....	158
- Launaea nudicaulis .....	162
- Launaea capitata .....	172
- Stipagrostis plumosa .....	173
- Pennisetum divisum .....	180
- Chloria gayana .....	186
V- Vegetative Analysis .....	186

	Page
Eco-physiological studies .....	192
1- Water saturation deficit .....	192
2- Seasonal changes in the percentage of total ash and crude fibers .....	200
3- Status of some macro- micro-nutrients in different plant tissues during the end of wet season of 1988 .....	
4- Photosynthetic pigments .....	210
5- Charbohydrate contents .....	214
6- Protein contents .....	216
7- Total amino acids .....	218
<b>SUMMARY AND CONCLUSION .....</b>	<b>211</b>
