	Page
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	3
2.1 Structure of cellulose	3
2.2. Physical pretreatments.	5
2.3. Chemical pretreatments.	7
2.4. Mode of cellulase action.	13
2.5. Kinetics of cellulase (Celluclast 1.5L).	18
2.6. Enzymatic hydrolysis of pretreated lignocellulosic materials.	20
3. MATERIALS AND METHODS	24
3.1 Source of raw materials.	24
3.2 Enzyme source	24
3.3 Pretreatment of lignocellulosic materials.	25
3.4. Exprimental methods	25
3.4.1 Chemical analysis	26
3.4.2 Enzyme assay	26
3.4.2.1. Filter paper of cellulase enzyme assay activity (FPAase)	28
3.4.2.2. Carboxymethyl cellulase activity (CMCase)	28
3.4.2.3. Evaluation of enzyme activity .	28
3.4.2.4. Effect of substrate concentration on the reaction activity of cellulase (celluclast 1.5L) enzyme.	29
3.4.2.5. Effect of pH on the cellulase enzyme activity (Celluclast 1.5L)	29
3.4.2.6. Effect of temperature on the cellulase enzyme activity (celluclast 1.5L)	29

3.4.2.7.	Effect of enzyme concentration on the reaction activity of cellulase (Celluclast 1.5L) enzyme.	30
3.4.3.	Saccharification process.	30
4.	RESULTS AND DISCUSSION.	32
4.1.	Pretreatment of lignocellulosic materials.	32
4.2.	Effect of different treatment on the saccharification process.	37
4.3.	Chemical composition of lignocellulosic compound (Crude and extracted by NaOH)	39
4.4.	Effect of different parameters on the reaction velocity and activity of cellulase (Celluclast 1.5L) enzyme.	41
4.4.1.	Effect of enzyme concentration on the reaction activity of cellulase enzyme.	41
4.4.2.	Effect of pH on the reaction activity of cellulase enzyme.	42
4.4.3.	Effect of temperature on the reaction activity of cellulase enzyme.	48
4.4.4.	Effect of substrate concentration on the reaction velocity of cellulase enzyme.	49
4.5.	Enzymatic saccharification of treated cellulosic materials.	60
5.	SUMMARY	69
6.	REFERENCES	72
	ARABIC SUMMARY
