

IV- RESULTS AND DISCUSSION	43
1- Physical properties of wheat kernels	43
2- Chemical properties of wheat and wheat by-products	44
1- Moisture content	44
2- Ash content	44
3- Crude protein content	46
4- Lipid content	47
5- Sugars content of wheat kernels and its milling by-products	48
6- Phytate phosphorous	50
3- The chemical composition of wheat flour grade 2 streams	51
1- Moisture and Ash contents	51
2- Crude protein and gluten contents	54
3- Total lipids content of different streams	56
4- Falling number (Alpha amylase activity)	58
5- Sugars content of different milling streams	60
6- Minerals contents of different milling streams	62
7- Phytate phosphorous content of different milling streams	64
3-1 The rheological properties of some milling streams	66
1- Farinogram characteristics of EL-Hoda milling streams	66
2- Farinogram characteristics of EL-Marwa milling streams	69
3- The extensograph of some flour streams obtained from EL-Hoda and EL-Marwa mills	72

3-2 Effect of blending some milling by-products	77
1-The rheological characteristics of mixing exhaust flour	
with 72% extraction rate flour	77
A:The farinograph test	77
B:The extensograph test	80
 2- The rheological characteristics of mixing bran flour	
with wheat flour 72% extraction rate	83
A:The farinograph test	83
B:The extensograph test	86
 3- The rheological characteristics of mixing bran flour	
with exhaust flour	89
A:The farinograph test	89
B:The extensograph test	92
 4- The organoleptic evaluation of pan-bread	95
1- Pan bread produced from wheat flour 72% and exhaust flour	95
2- Pan bread produced from flour 72% and bran flour	97
3- Pan bread produced from exhaust and bran flours	100
 V - Summary	101
