CHAPTER 1	
1.GENERAL INTRODUCTION	
1.1. Electroanalytical chemistry.	1
1.1.1. Potentiometric methods.	2
1.1.1.1. Ion selective electrode.	3
1.1.1.2. Types of ion-selective electrodes.	7
1.1.1.3. Conventional PVC membrane electrodes and their properties.	8
1.1.1.3. a. Nernst behavior.	8
1.1.1.3. b. Rapid response.	9
1.1.1.3. c. Low impedance behavior.	9
1.1.1.3. d. Long term stability.	10
1.1.1.3. e. Dielectric constant of plasticized PVC.	10
1.1.1.3. f. Ionic conductivity of plasticized PVC.	11
1.1.1.4. Application of ion selective electrode in the determination of drugs.	11
1.1.1.5. Direct potentiometry with drug substance selective electrodes.	11
1.1.1.6. Potentiometric titration based on ion-pair formation.	12
1.2. Absorption spectrophotometry.	13
1.2.1. Origin of absorption spectra.	13
1.2.2. Instrumentation.	14
1.2.3. Spectrophotometric identification.	17
1.2.4. Quantitative spectrophotometry.	18
1.2.5. Treatment of data.	20
1.2.6. Uses of absorption spectrophotometry.	21
