

Contents

Introduction and aim of work	1
Chapter – 1: The prenciples of human genetics	6
DNA structure	6
Genes	9
Organisation of DNA into Chromosomes	10
Replication of DNA and mitosis	13
Assortment and segregation of genes during meiosis	15
Regulation of gene expression	17
Different techniques of diagnosis of genetic and chromosomal diaseses	20
Chapter – 2: Genetic diseases	30
1) - chromosomal (Cytogenetic) disorders	30
2) Gene disorder	34
Monogenic Mendelian disorders	40
1) - Autosomal dominant inheritance	40
2) - AUTOSOMAL RECESSIVE INHERITANCE	42
3) - Sex-linked recessive	50
4) - Sex-linked Dominant	51
Non Mendelian disorders	52
A) - Multifactorial inheritance	52
B) - Nontraditional mode of inheritance	54
Therapeutic intervention based on genetic risk for diseases.	61

Chapter -3: Genetics of endocrinology	66
1) - Cytogenetic&chromosomal disorders	66
A) Abnormalities of chromosomal number	66
B) – Abnormalities in chromosome structure	92
2) - Monogenic mendelian inheritance	
A) - Autosomal dominant	102
B) - AUTOSOMAL RECESSIVE INHERITANCE	118
C) - Sex-linked recessive	130
2) - Non Mendelian inheritance disorders	139
A) - Multifactorial inheritance	139
B) – Nontraditional mode of inheritance	152
Summary	160
Recomandations	164
Referances	165
