Introduction	1
Aim of Work	3
Review of Literature	4
1. Incidence of Fasciolosis in buffaloes.	4
2. Diagnosis of fasciolosis.	8
3. Effect of <i>Fasciola</i> Infection on Reproduction.	10
4. Effect of <i>Fasciola</i> Infection on Blood parameters:	11
A. Haemogram.	11
B. Serum Biochemical Profiles.	14
C. Mineral Concentrations.	17
5. Hormonal treatments for improvement of reproductive efficiency of buffalo-cows.	18
6. Treatment of Fasciolosis.	21
7. Effect of Anti-<i>Fasciola</i> treatment on animal fertility.	23
Materials and Methods	25
1. Animals.	25
2. Experimental Design:	25
A. G-P-G protocol.	26
B. G-P-G plus CIDR protocol.	27
C. Avinide® Group.	27
D. Fasciontel® Group.	27
3. Diagnosis of the parasite:	27
A. Coprological diagnosis:	27
B. Serological diagnosis:	28
4. Record analysis of the selected buffalo-cows.	32
5. Detection of ovarian activity and pregnancy in buffalo-cows.	32
6. Sample collection.	32
7. Haematological Tests.	33
8. Hormonal Assays.	33
9. Biochemical Tests.	33
10. Determination of mineral concentrations.	34

11. Statistical analysis:	34
Results	35
1. Parasitological examination:	35
2. The effect of fasciolosis on length of post partum period (PPP), length of lactation period and the daily milk yield of buffalo-cows.	39
• Experiment I:	42
1. Hormones:	42
2. Haematological parameters:	45
3. Biochemical parameters:	58
4. Mineral Concentrations:	68
• Experiment II:	72
1. Effect of Avinide® and Fasciontel® anti-<i>Fasciola</i> treatments on Estradiol (pg/ml) and Progesterone (ng/ml) concentrations of <i>Fasciola</i> infected buffalo-cows serum.	72
2. Effect of Avinide® and Fasciontel® anti-<i>Fasciola</i> treatments on the pregnancy rates of <i>Fasciola</i> infected buffalo-cows.	72
Discussion	75
Summary	90
References	94
