Pages

Introduction & Aim Of Work.....	1
Review Of Literature	
- Chapter 1: Normal MRI Anatomy Of The Breast.....	4
- Chapter 2: Patho-Radiology Of Breast Neoplasm.....	14
Malignant Neoplasm.....	14
Benign Neoplasm.....	26
- Chapter 3: Technique Of MRI Mammography.....	31
Development Of Breast MRI.....	32
Advantages Of MRM.....	35
Considerations For Choosing a standard technique.....	49
Para-magnetic contrast agent	
- Chapter 4: MRI Interpretation Of Breast Malignancy.....	53
Basis of MRI Interpretation.....	54
Morphologic Criteria.....	55
Enhancement Criteria.....	58
MRI Evaluation of the Post Surgical Breast.....	62
MRI Evaluation Of The Breast Post Irradiation.....	79
MRI Evaluation Of The Breast Post Chemotherapy.	85
Patients & Methods.....	89
Patients' Presentation.....	95
Results & Statistical Analysis.....	145
Discussion.....	162
References.....	173
Arabic Summary.	

LIST OF FIGURES

	<i>Page</i>
Fig 1: Sagittal view of gross anatomy of the breast (Quoted from Mathes SJ & Nahai F, 1997).....	5
Fig 2: Terminal ducts lobular unit (Quoted from Elizabeth A. Morris & Laura Liberman, 2005).	5
Fig 3 : Normal MRI anatomy of the breast on T1 WIs(Quoted from Elizabeth A.Morris & Laura Liberman, 2005).....	7
Fig 4: skin & nipple on T1 fat suppressed image (Quoted from Elizabeth A Morris & Laura Liberman ; 2005).....	8
Fig 5: MIP image demonstrating blood vessels (Quoted from Elizabeth.A Morris & Laura. Liberman, 2005).....	8
Fig 6 : Axial T2 WI of normal breast	9
Fig 7 : Normal MRI Enhancement pattern of the breast (Quoted from Christiane K.Kuhl, 2005)	10
Fig 8 : Hormonal effect on MRI parenchymal pattern of the breast (Quoted from Elizabeth.A Morris & Laura.Liberman, 2005).....	11
Fig 9: Post contrast T1 fat suppression showing ductal enhancement (DCIS) (Quoted from Elizabeth A.M & Laura L, 2005)	17
Fig 10: T1-weighted, contrast-enhanced MRI of the left breast showing Invasive ductal carcinoma in the form of multiple rim-enhancing masses (Quoted from Lia Bartella & D.David Dershaw;2005)	18
Fig 11: Sagittal, T1-weighted, contrast-enhanced MRI of the right breast demonstrates irregular, inhomogeneously enhancing mass representing invasive lobular carcinoma. (Quoted from Lia Bartella & D.David Dershaw; 2005)	22

Fig 12: Sagittal, T1-weighted contrastenhanced MRI of the left breast shows a rim enhancing mass representing breast lymphoma associated with axillary lymph nodes.(quoted from Lia Bartella & D.David Dershaw;2005)	23
Fig 13 : Post contrast T1 WI showing irregularly shaped, irregularly marginated, heterogeneously enhancing mass representing Angiosarcoma.(quoted from Lia Bartella & D.David Dershaw;2005).	24
Fig 14 : (A,B) post contrast T1 WI, A shows a single nodular parenchymal metastatic deposit, B shows metastatic deposit confined to the skin region (Quoted from Elizabeth AM & Laura L; 2005)	25
Fig 15 : Post contrast Sagittal T1 WI showing enhancing Fibroadenoma. (Quoted from Andrea F & Abramson; 2005)	27
Fig 16: Axial T1 WIs of phyllodes tumor	28
Fig 17 : (A) shows T1-weighted precontrast image shows high signal proteinaceous or hemorrhagic fluid in a dilated duct (arrow) & (B) shows T1-weighted postcontrast enhanced image demonstrates slight enhancement of the mass filling defect (arrow). (Quoted from Andrea F & Abramson; 2005)	29
Fig 18 : A , T2 WI showing bright signal & B T1 WI post contrast showing intermediate signal of a simple cyst (Quoted from Lia Bartella & D.David Dershaw; 2005)	30
Fig 19 : Breast coils (Quoted from Elizabeth AM & Laura L; 2005)..	36
Fig 20 : patient's positioning.....	37
Fig 21 : Transverse plane (quoted from Nola M. Hylton; 2005).....	38
Fig 22 : sagittal plane (quoted from Nola M. Hylton; 2005).....	39
Fig 23: coronal images of ca breast	40
Fig 24: MIP images.....	47

Fig 25: Invasive breast cancer on pre-contrast T1-weighted image (Quoted from Daniel B. Kopans; 2007)	55
Fig 26 : Pre (A) & post-contrast (B) T1 WIs of cancer in the left breast (Quoted from Daniel B. Kopans; 2007).....	56
Fig 27: Post-contrast T1 WI showing enhancing breast cancer with speculated outline (Quoted from Carol H. Lee;2004).	57
Fig 28: Enhancement curves I, II & III (Quoted from Carol H. Lee,2004)	60
Fig 29 : Skin & trabecular thickening (Quoted from Susan Ackerman 2009)	67
Fig 30: Hematoma formed at biopsy site (Quoted from Susan Ackerman 2009)	67
Fig 31 : Resolving hematoma after surgery. (Quoted from Susan Ackerman 2009)	68
Fig 32 : Status post lumpectomy 3 months ago with close margins. Distortion is noted superiorly at the site of biopsy with adjacent skin thickening.(Quoted from Elizabeth A. Morris & Laura Liberman; 2005)	69
Fig 33: status post lumpectomy with multiple clips are noted posteriorly at the lumpectomy site .(Quoted from Elizabeth A. Morris & Laura Liberman; 2005).....	69
Fig 34: T1 & T2 WIs showing post operative Seromas .(Quoted from Elizabeth A. Morris & Laura Liberman; 2005).....	70
Fig 35 : (A) Pre- and (B) post-contrast images demonstrate a hematoma. .(Quoted from Elizabeth A. Morris & Laura Liberman; 2005)	70
Fig 36 : Residual carcinoma (arrows) posterior to seroma.(Quoted from Elizabeth A. Morris & Laura Liberman; 2005)	71

Fig 37 :Mammography showing post operative scarring (Quoted from Suzan Ackerman; 2009)	72
Fig 38 : Macro-calcifications related to fat necrosis (Quoted fromSuzan Ackerman; 2009)	73
Fig 39 :Cancer vs post-surgical scar (Quoted fromSuzan Ackerman; 2009).....	73
Fig 40: T1 WI post contrast demonstrates distortion, nipple retraction, and scarring in the central breast at the site of lumpectomy. (Quoted from Elizabeth A. Morris & Laura Liberman; 2005)	74
Fig 41 :Post contrast T1 fat suppression showing fat necrosis with rim enhancement.(Quoted from Caroline P, Barbara J & David S, 2008)	76
Fig 42: T1 pre-contrast T2 WIs showing oil cyst (Quoted from Cardenosa G;1997).....	76
Fig 43 :Pre & post contrast images showing granuloma of the breast displaying contrast uptake (Quoted from Boo-Kyung Han et al;2001).....	77
Fig 44 :Recurrence of breast cancer post surgical(Quoted from Elizabeth A. Morris & Laura Liberman; 2005)	78
Fig 45 :(a) Medio-lateral view of the left breast shows an infiltrating carcinoma, before therapy. (b) Medio-lateral view of the same breast 9 months after surgery and radiation therapy. Skin thickening, coarsening of the stromal pattern, and diffuse increase in breast density are apparent. Calcifications present on the pretreatment mammogram are unchanged.....	80
Fig 46 :Status post left lumpectomy followed by radiation therapy with significant artifact from clips placed at lumpectomy. Note skin	

thickening in the anterior breast. Diffuse mild enhancement is noted (Quoted from Elizabeth A Morris & Laura Liberman 2005).....	82
Fig 47: post-operative & irradiation , Mammography shows parenchymal distortion-MRI shows recurrence (Quoted from Kaplan JB & Dershow DD; 2005).	83
Fig 48 : Post-contrast T1 WI Pre-chemotherapy (A) & 5 wks post chemotherapy (B) showing response to therapy (Quoted from Kablan JB & Dershow DD;2005)	87
Fig 49 : Post-contrast T1 WI Pre-chemotherapy (A) & 7 wks post chemotherapy (B) showing no response to therapy (Quoted from Kablan JB & Dershow DD;2005)	87
