

INTRODUCTION AND AIM OF WORK

Chronic bronchitis, emphysema and bronchial asthma are the main varieties of chronic obstructive air way disease .

Radiology plays an important role in the diagnosis of such group of disease and in detection of their complications. A study of the radiological investigations and manifestations of this syndrome will be made .

Some cases will be presented in this work to demonstrate the different radiological signs expected in chronic obstructive air way diseases .

The aim of work is an attempt for better understanding of the radiological manifestations that could be encountered in cases diagnosed clinically as chronic obstructive air way disease .
