Abstract iii

CHAPTER I

BASIC FUNDAMENTALS OF QCD AND QGP

1.1 Introduction 1

1.2 QCD properties 3

1.2.1 Confinement 3

1.2.2 Asymptotic Freedom 5

1.3 Deconfinement phase transition 6

1.3.1 Debye screening mass $m_D(T)$ 7

1.4 The quark-gluon plasma (QGP) 9

1.4.1 QGP using lattice QCD 15

1.4.2 Experimental attempts to produce QGP 16

1.4.3 What is the strongly coupled plasma? 17

1.5 General remarks of Lattice on QCD 19

1.6 Previous works 23

1.7 Aim of the work 36

CHAPTER II

THEORETICAL CALCULATION

2.1 Introduction 37

2.2 The Bound State Problem 39

2.3 The equation of state (EoS) for a non - ideal plasma 44

2.3.1 Mayer's theory of plasma 44

2.3.2 The Strongly Coupled Quark – Gluon Plasma (SCQGP) 50

CHAPTER III

RESULTS AND DISSCUSION

3.1 The free energy and the internal energy potential 53

3.2 The mass spectra of the quarkonium system 58

3.3 The running coupling constant and the Debye screening mass 61

3.4 The equation of state (EoS) and the energy density for non-ideal quark-gluon plasma 64

3.4.1 The equation of state by using Mayer's theory of plasma 64

3.4.2 The energy density by using Mayer' s theory of plasma 68

3.4.3 The Plasma parameter $\Gamma(T)$ 71

3.4.4 The equation of state of the QGP by using the thermodynamic model 73

3.4.5 The energy density of the QGP by using the thermodynamic model 76

3.4.6 The interaction measure Δ 80

3.4.7 Conclusion 82

APPENDICES

Appendix A

A.1 The Jacobi's algorithm 84

Appendix B

B.1 The Fourier transformation 89

B.2 Derivation of the equation of state in the thermodynamic model 91

Appendix C

Program 1 (Jacobi method) 93

Program 2 (different subroutines) 100

Program 3 (EoS by Mayer's theory) 101

Program 4 (The phenomenological thermodynamic model) 103

Glossary 105
