Subject	Page
Aim of the work.....	I
I. Introduction.	1
1. Papers	1
1.1. Pulping	1
1.2. Bleaching	2
1.3. Specification of paper pulps.	3
1.3.1. Cellulose	3
1.3.2. Hemicelluloses.....	4
1.3.3. Lignin.	4
1.3.4. Fiber dimensions.....	5
1.4 Non fibrous additives.....	5
1.5. Sizing.....	6
1.5.1. Internal sizing.	6
1.5.1.1. Sizing with rosin	6
1.5.1.1.1. Types of rosin size.	7
1.5.1.1.2. Wet-end factors affecting rosin size performance	7
1.5.1.1.3. Dry-end factors affecting rosin size performance	8
1.5.1.1.4. Sizing with reactive or synthetic sizes.....	9
1.5.1.2.1 Types of synthetic size.....	10
1.5.2. Surface sizing.....	13
1.6. Sheet formation and properties.....	15
1.6.1.Sheet formation.....	15
1.6.2. Properties of paper.....	17
1.6.2.1. Physical properties	17
1.6.2.1.1.Grammage	17
1.6.2.1. 2.Thickness.	17
1.6.2.2. Strength properties.	17

Subject	Page
1.6.2.2.1. Breaking length	18
1.6.2.2.2. Bursting length	18
1.6.2.2.3. Tearing resistance	18
1.6.2.2.4. Folding endurance.....	19
1.6.2.3. Optical properties.....	19
1.6.2.4. Other properties.	20
1.6.2.4.1. Chemical properties.	20
1.6.2.4.2. Degree of polymerization	20
1.6.2.4.3. Ash content.....	21
1.6.2.4.4. Acidity and pH of paper.....	21
1.6.2.4.5. Absorptive properties.....	22
2. Deterioration of Paper.....	23
2.1. Physical deterioration.	23
2.1.1. Light.....	23
2.1.2. Heat and moisture.	24
2.2. Chemical deterioration.....	25
2.3. Atmospheric contamination.....	25
2.4. Effect of dust.	25
2.5. Harmful chemicals	26
3. Special papers.....	27
3.1. Water proof paper	27
3.2. Carbon paper.	27
3.3. Cast-coated paper.....	27
3.4. Cigarette tissue paper.....	28
3.5. Decorative papers.....	28
3.6. Electrical paper	28
3.7. Filter and drawing paper	28
3.8. Friction glazed paper.....	29
3.9. Magnetic recording paper or tape	29
3.10. Marbled paper	29
3.11. Mold and insect resistance paper	29
3.12. News print paper	29

Subject	Page
3.13. Butter paper	30
3.14. PVC coated paper	30
3.15. Tracing and oiled papers.....	30
3.16. Toilet paper plant	30
3.17. Wall paper	30
3.18. Wax coated paper.....	31
3.19. Safety papers	31
4. Different stages are used to detect the forgery and counterfeiting documents	31
4.1. Burnt papers	31
4.1.1. Initial investigation	32
4.1.2. Photographing using the oblique light.....	32
4.1.3. The investigation and photographing by using the I.R rays	33
4.1.4. Using the sensitive panels	33
4.1.5. Using silver nitrate.....	33
4.1.6. Using chloral hydrate.....	34
5. Fire-retardant papers.....	34
5.1. Flammability and Fire Resistance tests	35
5.1.1. Flammability.....	35
5.1.2. Flame and Smoke Spread	36
5.1.3. Flame tests	36
6. Polyvinyl alcohol in paper manufacture	37
6.1. Applications	38
6.2. Chemistry of poly (vinyl alcohol) with boron compounds	39
7. Printing and Printability	41
7.1. Types of Printing.....	41
7.1.1. Silk screen printing	41
7.1.2. Label Printing	42
7.1.3. Digital Printing	42

Subject	Page
7.1.4. Offset Lithography.....	42
7.1.5. Engraving.....	42
7.1.6. Thermography.....	43
7.1.7 .Flexography	43
7.1.8. Reprographics	43
7.1.10. Gravure	43
7.1.11. Ink-jet.....	43
7.2. Printing Quality.....	44
7.2.1. Inertial spreading	45
7.2.2. Absorption	45
7.2.3. Evaporation.....	45
II. Experimental.....	47
1. Materials.....	47
1.1. Papers	47
1.2. Anti- fire retardant solutions.....	47
1.3. Ink jet ink	48
2. Method of treatments	48
3. Paper sheet tests.....	49
3.1. Moisture content	49
3.2. Basis weight	49
3. 3.Degree of Sizing (Sizability)	50
3.4. pH values.....	50
3.5. Mechanical properties.....	50
3.5.1. The breaking strength	50
3.5.2. Burst factor	51
3.5.3. Tearing test	51
3.6. Optical properties.....	52
3.6.1. The whiteness	52
3.6.2. Opacity.....	52
3.7. Physical properties	52
3.7.1. Roughness.....	52

Subject	Page
3.8 FTIR spectroscopic analysis.....	52
3.9. Fire retardancy test.....	53
3.9.1. Flame test.....	53
4. Printability.....	54
4.1. Examination the ink colours	54
4.1.1. Total colors difference.....	54
4.2. The accelerated fading of printed black ink jet	54
5. Scanning electron microscope	55
6. Efficiency of writing appear test of burnt papers	55
6.1. Using silver nitrate	55
6.2. Using chloral hydrate.....	56
IV. Results and Discussion.....	57
3.1. Properties of commercial paper sheets (untreated) paper sheets	57
3.2. Treated paper sheet	58
3.2.1. Evaluation of strength properties of Paper sheets treated by FR solutions.....	68
3.2.1.1. Breaking Length.....	68
3.2.1.2. Burst Factor	71
3.2.1.3. Tear factor	72
3.2.1.4. Crystallinity index.....	75
3.2.1.5. The quality number	77
3.3. Evaluation of optical properties of paper sheets treated by FR solutions.....	78
3.3.1. Whiteness.....	78
3.3.2. Opacity.....	79
3.4. Evaluation of Physical properties of paper sheets treated by FR solutions.....	80
3.4.1. Thickness	80
3.4.2. The sizing.....	82
3.4.3. The roughness	84

Subject	Page
3.5. Evaluation of Chemical properties of Paper sheets treated by fire retardant solutions	86
3.5.1. Hydrogen-Ion Concentration (pH-values)	86
3.6. Evaluation of scanning electron microscope of Paper sheets treated by FR solutions	88
3.7. Evaluation of thermal properties of Paper sheets treated by F R solutions	89
3.7.1. Flame effect	89
3.8. Effect of aging on the properties papers sheets treated by FR solutions	91
3.8.1. Mechanical properties.....	91
3.8.1.1. Breaking length	92
3.8.1.2. Bursting strength	96
3.8.1.3. Tear factor	99
3.9. Hydrogen-Ion Concentration (pH-values) after aging	103
3.10. Evaluation of printing properties of Paper sheets treated by F R solutions	104
3.11. Total color difference.....	107
3.11.1. The goodness of printing	108
3.11.2. Relation of Burning behavior of the treated papers with paper quality as safety paper.....	110
- Summary and Conclusions.....	128
-References	132
-Arabic Summary.....
