

## TABLE OF CONTENTS

	Page
<b>APPROVAL SHEET</b>	i
<b>ACKNOWLEDGMENTS</b>	ii
<b>ABSTRACT</b>	iii
<b>TABLE OF CONTENTS</b>	iv
<b>LIST OF TABLES</b>	vii
<b>LIST OF FIGURES</b>	viii
<b><u>CHAPTER 1</u></b>	
<b><u>INTRODUCTION</u></b>	
1.1 General	1
1.2 Problem Statement, Research Significance	1
1.3 Main Objectives, Scope and Methodology of the Study	2
<b><u>CHAPTER 2</u></b>	
<b><u>LITERATURE REVIEW and RECENT DEVELOPMENTS</u></b>	
2.1 Masonry Shear Walls	3
2.2 Reinforced Concrete Infilled Frames under Monotonic Loading	9
2.3 Reinforced Concrete Infilled Frames under Cyclic Loading	18
<b><u>CHAPTER 3</u></b>	
<b><u>FINITE ELEMENT MODELING</u></b>	
3.1 Theoretical Descriptions of Elements	26
3.1.1 Solid 65-3-D Reinforced Concrete and Masonry	26
3.1.2 Link 8 (Steel Reinforcement)	27
3.1.3 Contact 52 (Concrete-Masonry Interface)	28
3.2 Material Modeling	29

3.2.1	Material Modeling for Concrete	29
3.2.1.1	Nonlinear Behavior of concrete	32
i.	Modeling of a Crack	32
ii.	Modeling of Crushing	33
3.2.2	Material Modeling for Steel Reinforcement	34
3.2.3	Material Modeling for Masonry	35
3.2.4	Material Modeling for Infill/Frame Interface	35

## **CHAPTER 4**

### **IMPLEMENTATION AND NUMERICAL EVALUATION**

4.1	General	37
4.2	Non linear finite element verification	38
4.2.1	First verification example (brae frame)	39
4.2.2	Second verification example (masonry wall)	41
4.2.3	Third verification example (Infilled Frame under monotonic loading)	43
4.2.4	Fourth verification example (Infilled Frame under cyclic loading)	46
4.2.5	Fifth verification example (Two Story Bare Frame)	48
4.2.6	Sixth verification example (Two Story infilled Frame)	51

## **CHAPTER 5**

### **PARAMETRIC STUDY**

5.1	General	54
5.2	Description of the Investigated Infilled Frames	55
5.2.1	Reinforced Concrete Frame	55
5.2.2	The Infill Panel	57
5.2.3	Infill-Frame Interface	57
5.3	Results and Discussion	57
5.3.1	Effect of Infill Panel	58
5.3.1.1	Behavior of Infilled frame under cyclic loading.	60
5.3.2	Effect of Infill Panel Thickness	64
5.3.3	Infill panel compressive strength.	68
5.3.4	Effect of interface normal stiffness (Kn)	72
5.3.5	Effect of Interface shear stiffness (Ks)	74
5.3.6	Presence of shear connectors at the infill-frame interface	77
5.3.7	Openings dimensions and locations	81

5.3.7.1 Presence of Window Opening in the Infill Panel	81
5.3.7.2 Effect of Door Opening	89
5.3.7.3 Effect of Opening Size	94
5.3.8 Effect of rectangularity ratio of infill panel	95
5.3.9 Frame compressive strength	97
5.3.10 Effect of frame reinforcing steel yield stress	100
5.3.11 Effect of vertical distributed stress on frame	102
5.3.12 Effect of frame beam/column relative stiffness	104
5.3.13 Effect of Number of stories	106
5.3.14 Effect of Number of bays	113
5.4 Diagonal Strut Model	120
<b><u>CHAPTER 6</u></b>	
<b><u>SUMMARY and CONCLUSIONS</u></b>	
6.1 Summary	125
6.2 Conclusions	126
6.3 Recommendations for Future Studies	129
<b><u>REFERENCES</u></b>	130
<b><u>ARABIC SUMMARY</u></b>	139
