Ageographical Survey of Services in Menoufiyya

The present study is intended to cover .Two issues:

- 1 st.** To give a general overview of the spatial pattern of service's facilities in Menoufiyya, and to give measurements of their efficiency and performance, compared with the national Figures.
- 2 nd.** To determine the optimal spatial pattern whereby the services may be provided, with the hope that the present study will be an integrated part in similar studies covering the whole country, with the ultimate aim of being a support for the planners and decision-makers.

The study concentrates on the public- sector services , auspiced by the state, no attempt has been made to deal with the services owned by the private sector, a sector that is worthy studying in another studies

The present study comprises six chapters preceded by an introduction covering the outlining of the area studied , the rationales of studying this issue, review of literature, materials and methods, obstacles and phasing the study.

A preliminary chapter follow the introduction,

It covers the implications of the study, defining the geography of services, the concept of services and enumerating
