

CONTENTS

Subjects	Page
Introduction	1
The aim of the work	3
Embryology of lower limb	
• Development of limbs	4
• Lower limb growth.....	9
Incidence and etiology.....	13
Pathologic anatomy	
• Leg	18
• Ankle and Foot	20
• Knee	25
• Acetabulum and Femur	27
• Other associated anomalies	29
Classification	
-Frantz and O'Rahilly classification	30
-Coventry and Johnson classification	31
-Achterman and Kalamchi classification	33
-Functional (Birch) classification	35
-A new classification system of FH	38
-Catagni classification	40

-Paley classification	42
-----------------------------	----

Diagnosis

● Clinical appearance	44
● Imaging studies	45
● Differential diagnosis	48

Treatment

●Rationale of Treatment	54
- Amputation and prosthetic management	56
- Management of FH using Ilizarov method	62
- Choice between amputation and lengthening	85
- Treatment of associated anomalies with FH	
▪ Bilateral FH.....	87
▪ Correction of tibial bow in FH	88
▪ Correction of genu valgum in FH	90
▪ Ankle reconstruction in FH	91
▪ Ball and socket ankle joint	92
▪ Deficient lateral malleolus	97

Summary	104
