♣ <i>Introduction & aim of work.....</i>	1-4
♣ <i>Gross and CT anatomy of colon and rectum.....</i>	5-20
♣ <i>Pathology of colorectal tumors</i>	21-35
♣ <i>Technique of multislice computed tomography (MSCT).....</i>	36-59
♣ <i>Radiological manifestations of colorectal tumors.....</i>	60-84
♣ <i>Summary & conclusion.....</i>	85-86
♣ <i>References.....</i>	87-96
♣ <i>Arabic summary.....</i>	1-1

List of figures

NO	TITLE
1	Anatomy of the large intestine.
2	Caecum & appendix with their arteries.
3	Interior of the caecum & lower end of ascending colon, showing ileocaecal valve.
4	Coronal section of rectum& anal canal.
5	Arterial supply of the large intestine.
6	Lymphatic drainage of the large bowel.
7	Pelvi-abdominal sequential axial CT cuts.
8	Axial CT images showing the relations of the rectum to surrounding structures
9	Gross picture of villous adenoma.
10	Gross picture of adenocarcinoma arising in villous adenoma.
11	Fungating adenocarcinoma of the colon.
12	Ulcerative adenocarcinoma of the colon.

13	Dukes' staging system.
14	TNM staging system.
15	Astler- Coller staging system.
16a	Oblique view of a single-section scanner.
16b	Oblique view of a multisection scanner.
17	Equal-width and unequal-width detector array designs.
18	Cross-sectional profile of an unequal-width detector design: <ul style="list-style-type: none"> (a) To acquire four 5-mm-thick sections. (b) To acquire four 2.5-mm-thick sections. (c) To acquire four 1-mm-thick sections. (d) To acquire Two 0.5-mm-thick sections.
19	Slice formation with equal detector row four-channel scanner: <ul style="list-style-type: none"> (a) To acquire four 5-mm-thick sections. (b) To acquire four 2.5-mm-thick sections. (c) To acquire four 1.25-mm-thick sections. (d) To acquire two 0.625-mm-thick sections.
20	Anatomic coverage: <ul style="list-style-type: none"> (a) The coverage for multi-section CT. (b) The coverage for single-section helical CT.To scan the same volume in the same time with single section helical CT: (c) One must increase the pitch. (d) Or section thickness. (e) For the same image quality, the scanning time would have to be lengthened eightfold.
21a	Isotropic imaging.

21b	Non-isotropic imaging.
22	Hepatic flexure lesion in a 67-year-old man: <ul style="list-style-type: none"> (a) Endoluminal CT colonographic view. (b) Transverse CT image (window, 1500 HU; level, – 200 HU). (c) Transverse CT image (window, 400 HU; level, 40 HU).
23	Seven-millimeter-diameter polyp (arrow) in 68-year-old woman: <ul style="list-style-type: none"> (a) Transverse CT colonographic image. (b) Coronal CT colonographic image. (c) Three-dimensional volume-rendered endoluminal CT image. (d) Initial conventional colonoscopic image.
24	Pedunculated polyp (14 mm) in 74-year-old man: <ul style="list-style-type: none"> (a) Transverse CT colonographic image. (b) Coronal CT colonographic image. (c) Three-dimensional volume-rendered endoluminal CT image. (d) Corresponding colonoscopic image.
25	Round polyp (6 mm) in 71-year-old man: <ul style="list-style-type: none"> (a) Transverse CT colonographic image.

	<p>(b) Coronal CT colonographic image.</p> <p>(c) Three-dimensional volume-rendered endoluminal CT image.</p> <p>(d) Three-dimensional volume-rendered endoluminal CT image.</p>
26	<p>Polypoid occlusive carcinoma in the sigmoid colon:</p> <p>(a) Colonoscopic image.</p> <p>(b) Transverse CT colonographic image.</p> <p>(c) Corresponding three-dimensional endoluminal view.</p> <p>(d) Transverse CT colonographic image.</p> <p>(e) Corresponding endoluminal view.</p>
27	Axial CT & MRI images showing rectal cancer infiltrating the mesorectal fat
28	Axial & sagittal MPR images of T4 rectal tumor with peritoneal thickening
29	Sagittal MPR CT image of a case of T3N0 rectal cancer
30	Axial MDCT image of distal rectal tumor
31	Axial & sagittal MPR CT images of a T3 anterior rectal tumor
32	Axial & oblique coronal MPR CT images of T3 rectal cancer
33	Sagittal MPR CT image of T4 rectal cancer with

	peritoneal involvement
--	------------------------

List of tables

Table. 1	Distribution of adenomatous polyps and cancers.
Table. 2	TNM staging classification for CRC.
Table 3	Astler-Coller modification of Dukes' staging system for CRC.
Table 4	Correlation between Thoeni's classification and TNM T staging for rectal cancer by CT

List of abbreviations

<i>CRC</i>	Colorectal cancer.
<i>CT</i>	Computed tomography.
<i>UC</i>	Ulcerative colitis.
<i>MCCT</i>	Multi-channel CT.
<i>MSCT</i>	Multi-slice CT.
<i>MDCT</i>	Multi-detector CT.
<i>DAS</i>	Data acquisition system.
<i>MPR</i>	Multi-planer reconstruction.
<i>VE</i>	Virtual Endoscopy.
<i>CTC</i>	Computed tomographic colonography.
<i>FOBT</i>	Fecal occult blood test.
<i>2D</i>	Two dimensional.
<i>3D</i>	Three dimensional.
<i>NCI</i>	National Cancer Institute.
