|----------------------------------------------------------|-------------|
| Introduction and Aim of the Work                         |             |
| Review of Literatures                                    |             |
| 1- Physiology                                            |             |
| - Metabolism of VIT.D. and its Disorders...              | 1           |
| - Parathormone and Calcitonin.....                       | 7           |
| - Chemistry of Bone Minerals .....                       | 9           |
| - Mechanism of Calcification .....                       | 11          |
| 2- Pathology and Pathogenesis of Rickets .....           | 13          |
| 3- Clinical Picture                                      |             |
| - Types of Rickets .....                                 | 18          |
| - Clinical Manifestations .....                          | 24          |
| 4- Radiology of Skeletal Disorders of Rickets.           |             |
| - Radiological Examination of a<br>Paediatric Case ..... | 29          |
| - Radiological Findings .....                            | 31          |
| - Radiological Differential Diagnosis.....               | 46          |
| Discussion and Summary .....                             | 55          |
| References .....                                         | 63          |
| Arabic Summary                                           |             |
