

## **INTRODUCTION & AIM OF WORK**

## CHAPTER (I)

---

### INTRODUCTION, AND AIM OF WORK

---

The aim of this work is to evaluate prostatic enlargement in adult men by radiological procedures. Straight examination and excretory urograms were performed, to visualize the bladder, its base, together with any obstructive features in either the upper or lower urinary tract .

Ultra sound (suprapubic approach) was performed to some patients, while other patients were examined by computed tomography technique after contrast injection .
