

CONTENTS

Title	Page
1. Introduction. -----	1
2. Objectives of study. -----	3
3. Review of Literature. -----	5
- Relevant information concerning Kingdom of Saudi Arabia. -----	6
- Historical aspects. -----	11
- Heredity and basic genetics. -----	12
- Evidence for a genetic etiology. -----	15
- Segregation models and modes of inheritance. -----	16
- Autosomal recessive inheritance. -----	18
- Highlights on consanguinity research. -----	22
4. Materials and Methods. -----	32
- Study area. -----	33
- Sampling. -----	33
- Sample size. -----	34
- Questionnaire design. -----	35
- Conduct of interviews. -----	36
- Pilot study. -----	37
- Phases of the study. -----	37
5. Results. -----	40
- Demographic pattern of the study samples. -----	41
- Consanguinity rates. -----	44
- Respondent's preference for type of marriage. -----	45
- Views of respondent's concerning future marriage of their their children. -----	46
- Knowledge of respondents concerning influence of C.Ms. in causation of inherited disorders. -----	47
- Adequacy of Public Health Education. -----	47
- Premarital counseling. -----	47
- Islamic teaching. -----	48
- Average number of pregnancies/woman. -----	48
- Average birth weight. -----	49
- Reproductive wastage. -----	50
- Congenital disorders. -----	51
- Other diseases which have genetical association. -----	52
6. Discussion. -----	93
7. Conclusions and Recommendations. -----	104
8. Summary. -----	110
9. References. -----	116
10. Appendix. -----	121
- Questionnaire. -----	122
- Glossary. -----	126

TABLES

A)	<u>Review Tables.</u>	Page
----	-----------------------	------

Table I

Development of Health Services in Saudi Arabia. -----	9
---	---

Table II

Total estimated population. -----	10
-----------------------------------	----

Table III

Models for the genetic analysis of autosomal traits with family data. -----	17
---	----

B) Tables for Results.

Table	Item	Page
1.	Distribution of respondents according to primary health care centres and sex. -----	53
2.	Distribution of respondents according to the place of origin within the Kingdom. -----	54
3.	Age distribution of the sample investigated. -----	56
4.	Distribution of age - sex and type of marriage. -----	58
5.	Level of education/sex. -----	60
6.	Distribution of the respondents according to level of education and type of marriage. -----	62
7.	Occupational distribution. -----	63
8.	Marital distribution. -----	64
9.	Temporal trend in rate of C.Ms. -----	65
10.	Consanguinity by age of respondents. -----	66
11.	Average in-breeding coefficient (F) for the Riyadh study. -----	67
12.	Respondents preference for type of marriage (C.M. or non-C.Ms.) -----	68
13.	Respondent's preference for C.M. categorized according to type of marriage. -----	70
14.	Reasons given for preference for C.Ms. -----	71
15.	Reasons given for not preferring C.Ms. -----	72

Table	Item	Page
16.	Would you encourage your children to marry a relative?	73
17.	Knowledge of respondents concerning influence of C.Ms. in causation of inherited disorders. -----	75
18.	Respondents evaluation of the adequacy of public health education with respect to adverse effects of C.Ms. -----	77
19.	Variation in respondent's answers related to their type of marriage. -----	79
20.	Knowledge of importance of premarital counseling according to type of marriage. -----	80
21.	Knowledge about Islamic teaching with respect to consanguineous marriages. -----	81
22.	Type of marriage and the average number of pregnancies/ woman with respect to age groups. -----	82
23(A).	Comparison of average birth weight of 286 offsprings grouped according to parental relationships. -----	83
24(B).	Percentiles for the distribution of birth weight. -----	84
24(A).	Prenatal deaths and parental consanguinity. -----	85
24(B).	Neo-natal deaths and total wastage with respect to parental consanguinity. -----	87
25.	Congenital and heredofamilial disorders. -----	89
26.	Other disorders which have genetical associations. -----	91
