List of figures	
Introduction	1
Literature review	7
Material and methods	48
Part1: Physico-chemical analyses of water samples	48
1. Sample collection	48
2. Physico-chemical analyses of water samples	48
2.1. Temperature (T)	48
2.2. Values of pH	48
2.3. Biochemical oxygen demand (BOD)	49
2.4. Chemical oxygen demand (COD)	49
2.5. Dissolved oxygen (DO)	49
2.6. Turbidity	49
Part II: Isolation and identification of <i>E.coli</i>	50
1. Isolation of <i>E.coli</i>	50
2. Purification of <i>E.coli</i>	50
3. Determination of <i>E.coli</i> count	51
4. Identification of <i>E.coli</i>	51
4.1. Metabolic fingerprinting using Biolog system	51
4.2. 16s rRNA gene sequencing	53
4.2.1. Isolating Bacterial Genomic DNA	53
4.2.2. Amplifying the 16S rDNA Region	54
4.2.3. PCR products for Cycle sequencing	55
4.2.3.1. Performing Cycle Sequencing	55
4.2.3.2. Purifying Extension Products	56
4.2.3.3. Electrophoresis and sequencing of PCR extension products	56
4.2.4. Analyzing Data	56
Part III: Characterization of <i>E.coli</i> biodiversity	57
1. Cultural characters	57
2. Biotyping	57
3. Serotyping	58
4. Phage typing	58
4.1. Preparation of virus lysate	58
4.2. Assaying of <i>E.coli</i> viruses	59
4.2.1. <i>E.coli</i> isolates pattern of the phages	59
4.2.2. Coliphage isolates	59
4.2.2. Preparation of high titer phage lysates	60
5. Congo red dye agar test (CR Test)	60
1.6. Sequence analysis	61
1.7. Nanoscale evaluation of biodiversity	61
7.1. Using image processing	61

1.7.2. Biosynthesis of Gold nanoparticles	63
Results	63
Part I: Physico-chemical analyses of water samples	63
1. PH	63
2. Temperature	63
3. Turbidity	63
4. Biochemical oxygen demand (BOD)	64
5. Chemical oxygen demand (COD)	64
6. Dissolved oxygen (DO)	64
Part II: Isolation and identification of <i>E.coli</i>	65
1. Isolation of <i>E. coli</i>	65
2. Determination of <i>E.coli</i> count in water samples	66
3. Identification of <i>E.coli</i>	66
3.1. metabolic fingerprinting using biolog system	66
3.2. 16s rRNA gene sequencing	71
Part III: Characterization of <i>E.coli</i> biodiversity	73
1. Cultural characters	73
2. Biotyping	76
3. Serotyping	81
4. Phage typing	82
5. Congo red dye test	84
6. Sequence variability of 16s rRNA gene	85
6.1. Sequence analysis based on multiple sequence alignment	85
6.2. Nucleotide sequence statistics	91
6.3. Restriction pattern of DNA sequence	94
6.4. 16s rRNA secondary structure prediction	97
6.5. Population genetic analysis from an evolutionary perspective	101
7. Nanoscale evaluation of biodiversity	110
7.1. Using image processing	110
7.2. Image processing for detecting stages of DNA replication from <i>E.coli</i> – <i>EG1</i> cells	121
7.3. Biosynthesis of gold nanoparticles (GNPs) by <i>E.coli</i> isolates	124
Discussion	129
Summary	146
Reference	151
Appendix
