Aim of the work	
Summary	
Introduction	

Part (I)

Synthesis and chemical reactions of 5(4)-oxazolones.....	1
Synthesis of oxazolones	1
(1) Erlenmeyer synthesis.....	2
(2) From α - acylamino acids	4
(3) Dehydration of β -alkoxy or β -acyloxy- α -acylamino acids.....	4
(4) Dehydration of β -hydroxy- β -acylamino acids.....	5
(5) From α -acylamino esters and amides.....	5
(6) Bergmann synthesis.....	6
(7) Miscellaneous synthesis.....	7
(a) From 4-alkylidene and 4-arylidene-2-oxo-1,3,5-oxadiazines.....	7
(b) From arylidene hippuric azides.....	7
(c) From propargylic alcohols and p- toluenesulfonyl isocyanate.....	8
Chemical reactions of oxazolones.....	9
(1) Hydrazinolysis.....	9
(2) Aminolysis.....	11
(3) Action of amino acids.....	12
(4) Thiolysis.....	14
(5) Azidolysis.....	15
(6) Action of hydroxylamine hydrochloride.....	16
(7) Miscellaneous reactions.....	16
(a) Friedel-Crafts reaction.....	16
(b) Action of Grignard reagents.....	18
(c) Reaction with azo derivatives.....	20
(8) Biological activity of oxazolone derivatives	20

Part (II)

Synthesis of imidazoles and imidazolones.....	23
(1) From carboxylic acid derivatives.....	23
(2) From diketones.....	25
(3) From amide derivatives.....	29
(4) From amidine and related compounds.....	35
(5) From diamine derivatives and related compounds.....	40
(6) From nitrile compounds.....	43
(7) From amino acid compounds.....	47
(8) From amino alcohols.....	49
(9) From oxime compounds.....	50
(10) From nitroaniline and related compounds.....	51
(11) From nitro-pyridine derivatives.....	52
(12) From polymer bound compounds.....	52
(13) From benzoin compounds.....	53
(14) From tetracyanoethylene.....	55
(15) From Epoxydiphenylene.....	55
(16) From β -aminoketones compounds.....	56
(17) From schiffs base.....	57
(18) By using microwaves.....	57
Chemical reactions of imidazoles and imidazolones	59
Properties of imidazoles and imidazolones.....	59
Reaction of neutral imidazoles.....	59
Basicity of imidazole.....	59
Acidity of imidazole.....	60
1- Electrophilic attack.....	60
A- Electrophilic attack on nitrogen.....	60
1) Alkyl halides and related compounds.....	61
2) Aryl halide and related compounds.....	64
3) Aroyl halides and related compounds.....	65
4) Other electrophiles.....	66
-Reaction of cyanogens bromide with imidazole.....	66

B- Electrophilic attack on carbon.....	66
1) Alkyl halide and related compounds.....	66
2) Nitration.....	70
3) Bromination.....	71
4) Iodination.....	72
5) Reaction with aldehydes and ketones.....	72
- Mannich reaction.....	72
6) Oxidation.....	74
Nucleophilic attack.....	74
A-Nucleophilic attack on carbon atom.....	74
1) Hydroxide ion and other O-Nucleophiles.....	74
2) Amines and amide ions.....	75
B- Nucleophilic attack at nitrogen atom.....	75
3) Thermal and photochemical reactions.....	76
a) Fragmentation.....	76
b) Rearrangement.....	76
c) Ring opening reaction.....	77
4) Miscellaneous reaction.....	77
a) Diels-Alder dimerization.....	77
b) Vilsmeier -Haack reaction.....	78
c) Pinacol- like rearrangement reaction.....	78
Discussion	

PART (I)

Synthesis and reaction of some 2-aryl-4-arylidene-5(4)-oxazolones.....	81
1-Synthesis of 4-arylidene-2-aryl-5(4)-oxazolones.....	81
2- Reaction of 4-arylidene-2-aryl-5(4)oxazolone.....	83
A) Aminolysis.....	83
B) Reaction with amino acids.....	86
C) Hydrazinolysis	86
D) Base-catalyzed ring opening with hydroxylamine hydrochloride.....	89
E) Azidolysis.....	93

PART (II)

Synthesis of amino acid derivatives of imidazolones.....	95
(A) synthesis of 2N-(pht-amino), 2N-(tos-amino acid) imidazolones.....	96
(B) Synthesis of 2-(aminoacyl) imidazolones	101
Biological activities of the synthesized compounds.....	106
Experimental.....	108
