Summary	i-iii
1. Introduction	2
1.1. Mechanism of corrosion	2
1.2. Corrosion inhibition	4
1.3. Quantitative structure–activity relationships (QSAR)	7
1.4. Organic substances as inhibitors of steel	8
1.4.1. Hydrazines and thiosemicarbazides and their salts	9
1.4.2. Thiourea and semicarbazide derivatives	12
1.4.3. Schiff base derivatives	15
1.4.4. Tertiary amines, morpholine and piperidine derivatives	17
1.4.5. Pyrrolidin-2-ones	19
1.4.6. Pyrazole derivatives	20
1.4.7. Oxadiazoles	25
1.4.8. Thiadiazoles	28
1.4.9. Isoxazolidine derivatives	30
1.4.10. Triazole derivatives	33
1.4.11. Pyridine derivatives	36
1.4.12. Aromatic hydrocarbons	44
1.4.13. Benzimidazole derivatives	46
1.4.14. Pyrazine and Pyridazine derivatives	50
1.4.15. Pyrimidine derivatives	52
1.4.16. Hydroxamic acids	53
1.4.17. Amines	54
1.4.18. Amino acids	54
1.4.19. Pyrazines	56
1.4.20. Carbohydrate derivatives	56
1.4.21. Indoles, Benzothiazoles and Benzotriazdes	57
2. Results and discussion	60

2.1. Quantum chemical studies on the corrosion inhibitors of steel in acidic medium by some aniline derivatives	60
2.1.1. Correlation analysis	61
2.1.2. Linear regression analysis	70
2.2. Quantum chemical studies on the efficiencies of some aromatic hydrazides and Schiff bases as corrosion inhibitors of steel in acidic medium	90
2.3. QSAR of benzimidazole and 2-substituted derivatives as corrosion inhibitors by using the quantum chemical parameters	102
2.3.1. Correlation analysis	104
2.3.2. Linear regression analysis	105
2.4. Quantum chemical studies on the corrosion inhibitions of steel in acidic medium by some triazole, oxadiazole and thiadiazole derivatives	117
2.5. QSAR of some pyridine derivatives as corrosion inhibitors of steel in acidic medium	134
3. Methods	155
4. Conclusion	160
5. References	164
