

The Research Summary

Introduction and The Research Problem:

The players having high standard, They feeling with force desire from Tim to time in the definition on abilities, and levels, in spite of this the desire, and this the feeling from there players and abidance by trainers, that reality to single of operation the measurement, and the evaluation to the definition an abilities levels, and precceding to advancc, and still need to high interest, the role expand for the measurement, and the evaluation in operations to, training, guidance, selection, and prophecy..... Etc (52 : 7).

In the group games in important matters for trainer to stopping on standards characteristic achievement of the physical and the skill ful.....etc.

Special equal all of the player every single or with team all of them, of help information about all player standard every single in schemetical aspects, and training single guidance, also, of help special information of all team in schemetical aspects, and training group guidance, after the measurement this standards with using activity tests, to increase front trainer of valuable about this standards, and don't give like this devoid of valuable any idea about of force or weakness of standard also, trainer cant order any legally about this standards except when comparison with another group standards.

The trainer is inability front problem from this group, which will give there comparison, in Europe always to increase like this, the valuable on, the contrary what case for them.

There fore should be creation of different levels criterion for player of (group games) is general, and the hand ball (special) with valuable creation to Egyptian team standard, (A,B) excellent series, (A.B) the first and (11: 180 -181) the second, to become this valuable like special aims the standard

than should be to exceed order there with using this the valuable in the guidance for training operation, and using like the specific training.

The aims or the research:

The define of some variables the physical and the skill full which characteristic all standard from team man's standards in republic Arabic Egypt (R.E.A)

The define of difference direction between different standards of the research sample.

The assumption of the research:

The assumption of the research is formulation in the questions shape: as follows:

- what is it the variables important the physical and the skillful which characteristic all standard from team man's standards in republic Arabic Egypt (R.E.A)?..
- is he in find difference between different standards of the sample?.

The research method:

*the scholar found that the survely method (case study method) the most suitable methods to chive the objectives this study.

The research sample:

*the research sample is inclusion of (108) player from different standards player for man's in Republic Egypt of Arabic (R.E.A) and nomination (4) physical tests is wholly applied, and analysis (10) match to imitate (22) team from team this standards.

Means and tools of date collection:

*The scholer used the means of data collection which fitted the nature of this research, and they are as follows:

- searching the scientific reference and the previous studies.

- Selecting (4) tests to measure the physical performance.
- Planning application of data collection in match analysis by the video.

Deduction:

- The Egyptian team is predominate to standards over plus in endurance speed, agility, endurance performance, and explosive power for leg and movement left back during the match, depend on goals recorded from organizer offensive, where with to appear exploitation weakness to fast break, also not depend on speeding emission after goal recorded is one offensive kinds and characteristic with medium standard in cutting, absession and free throw, also with standard is weakness in the dispersion and the blocking, also the high presentage loss is law errors and goal keeper repluse down to out of goal and skillful errors.

- (A) excellent is predominate on (B) excellent and the first (A,B) and the second in speed endurance, endurance performances, and explosive power also the movement left back during the match, depend on goals recorded with used offensives kinds of organizer in succession, fast break and speed center, the characteristic with high standard in the cutting, also weakness standard in the dispersion, free throw and blocking, also the high presentage loss is goal keeper repluse errors and skillful errors, and down to law errors and out of goal.
- (B) excellent, is predominate on (A,B) the first and the second in speed endurance, agility, endurance performance explosive power and movement left back during the match, depend on goals recorded from organizer offensive and fast break. Characteristic with high standard in cutting, weakness standard in dispersion, free throw and blocking, high presentage loss is skillful errors goal keeper repulse and down to law errors and out of goal.

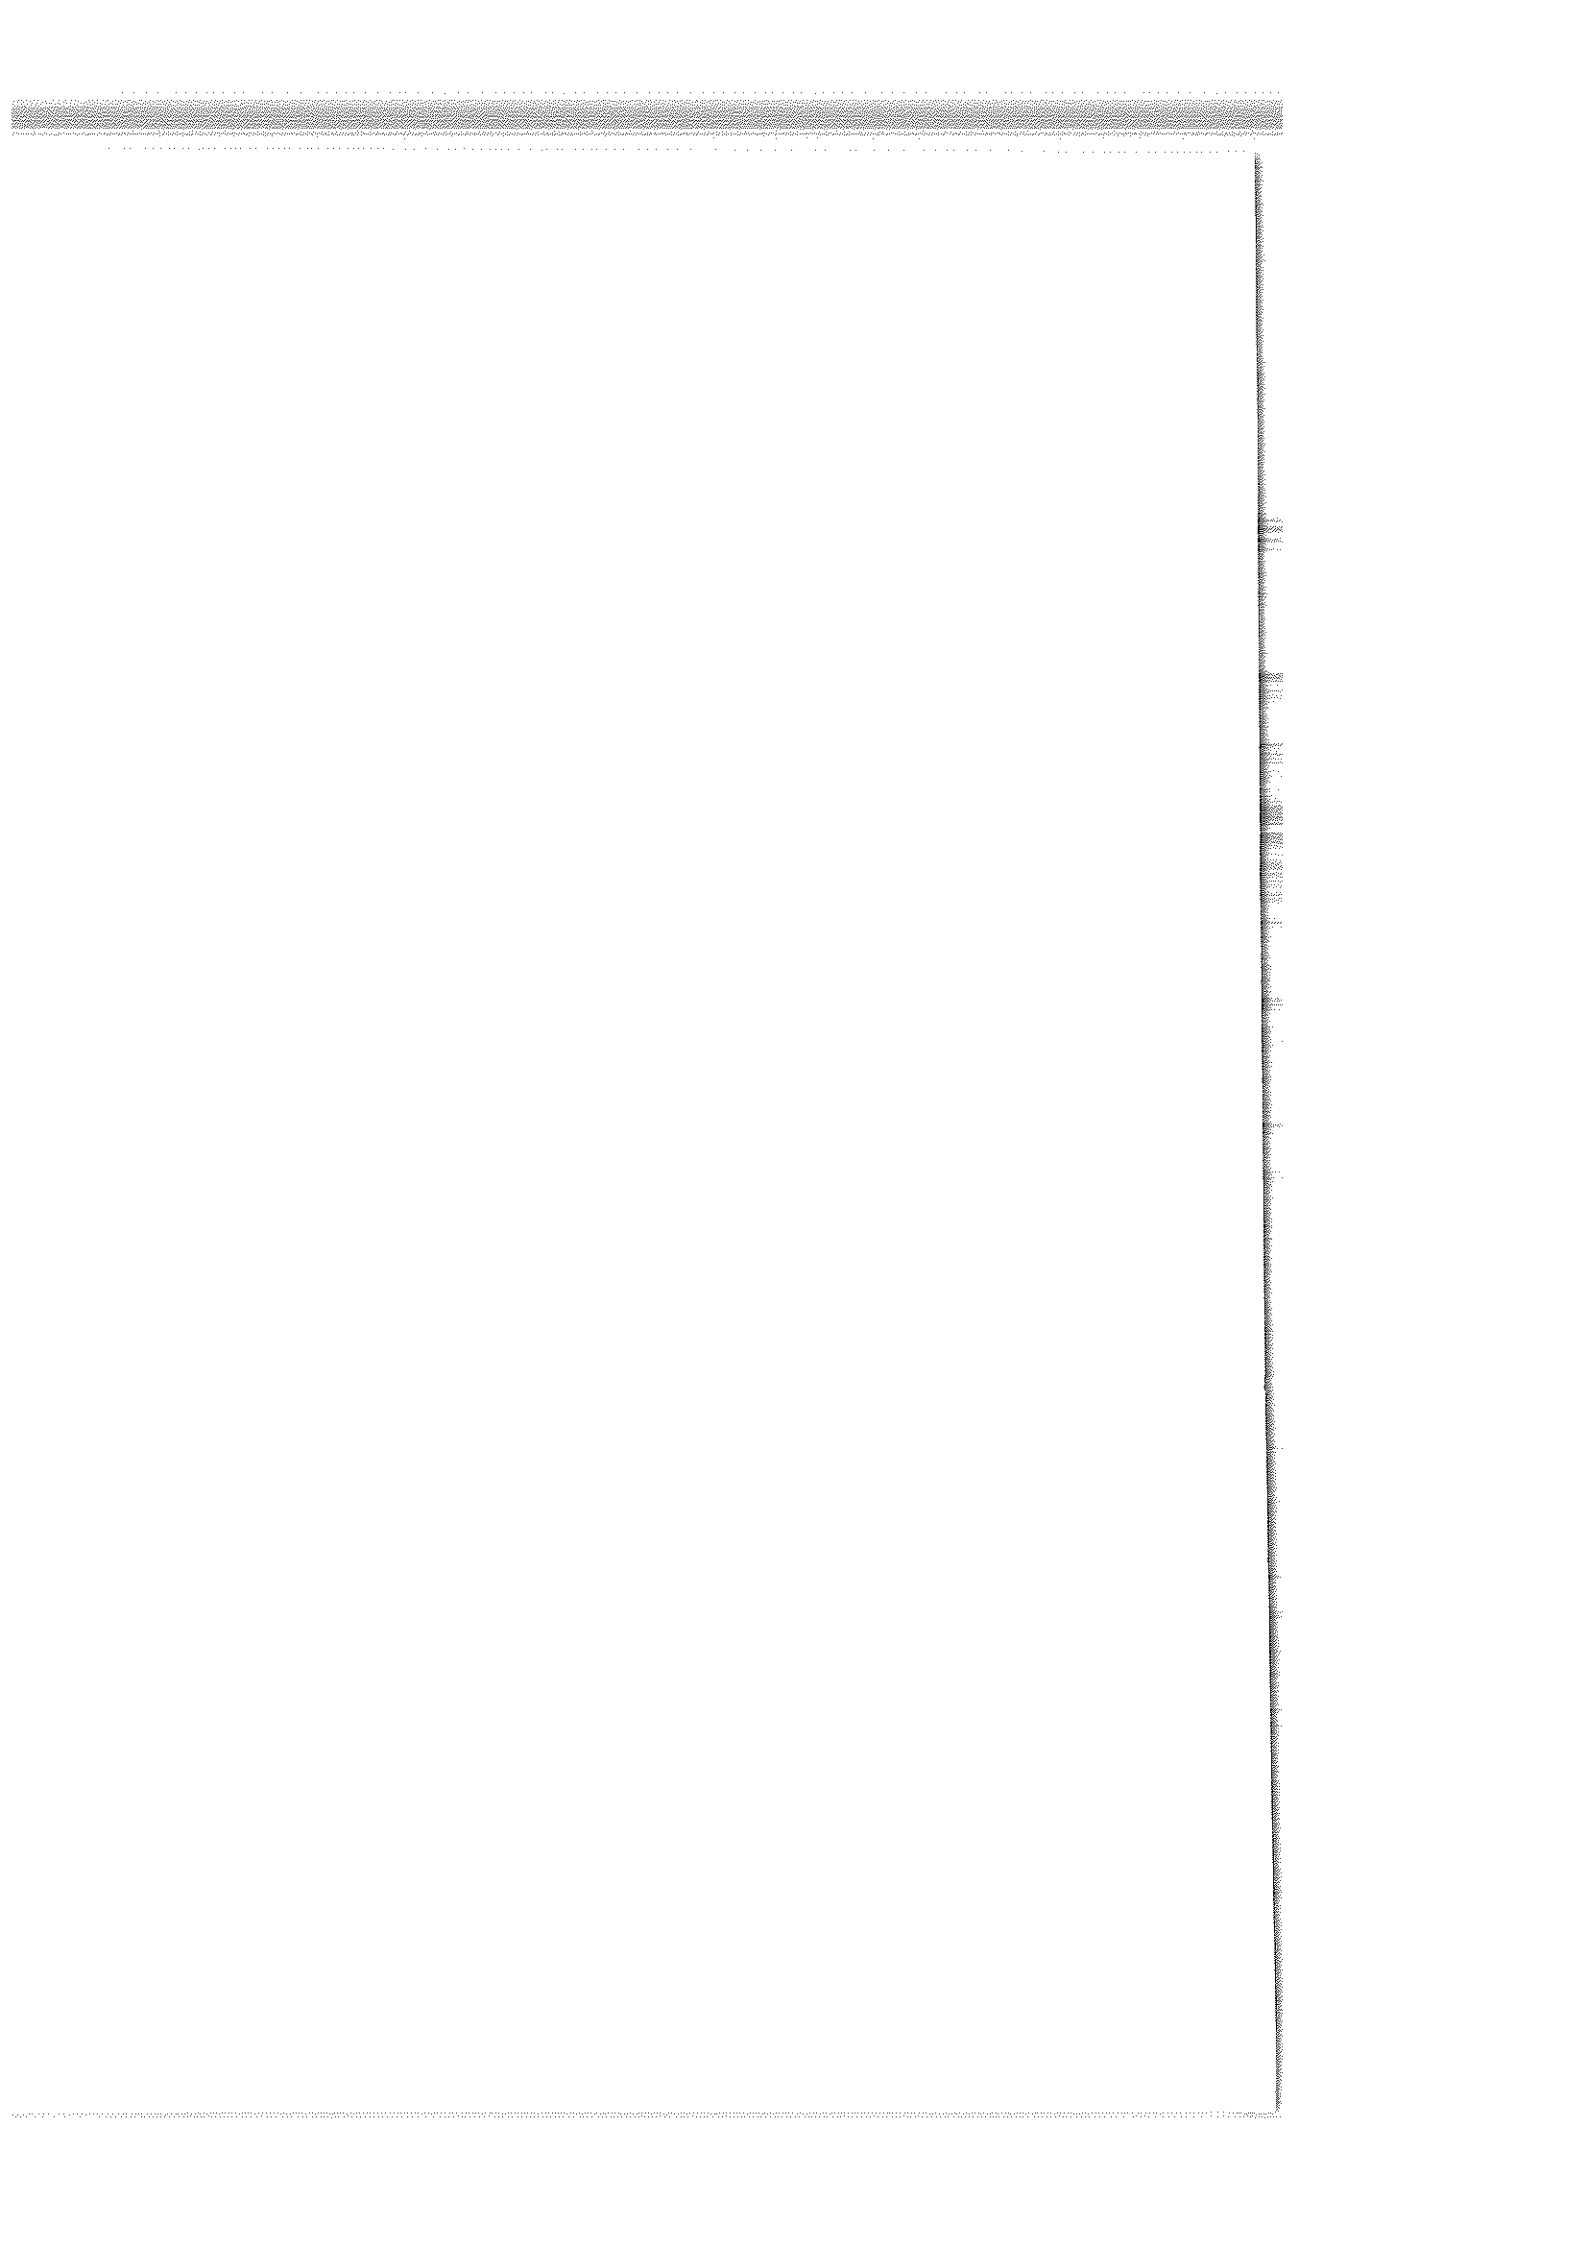

- (A) the first is predominate on the first and the second (B) in speed endurance, agility, explosive power for leg and endurance speed also. the movement left back during the match, nearly become equal of the recorded from organizer offensive and fast break, characteristic with high standard in cutting and weakness standard in dispersion, free throw, and blocking, high percentage loss is goal keeper repulse, skillful errors, law errors and down to out of goal.
- (B) the first is predominate nearly on the second in explosive power for leg, agility and endurance performance, also the second class is predominate on (B) the first to the movement left back during the match, (B) the first is depend on the organizer offensive and fast break in goal recorded, while the second is depending on goal recorded from organizer offensive also characteristic (B) the first and the second with high standard in cutting and weakness standard in dispersion, free throw and blocking, also to increase in this is the standards to loss ball errors by law errors and skillful errors (goal keeper repulse – out of goal – another loss).

The recommendation of the research:

- The results of using which to obtain for the study like (the physical and skill full) to training of aims for competition standard to guidance training which to reach rising at the highest level.
- The trainers they used for the results which to obtain for the study in improvement to effective performance in weak pions which to be complete of the delimitation to different levels.
- Should be putting exceptional foundation on series clubs (B) excellent, and (A,B) the first, and the second, also special to teams with characteristic which depend on far directing.

Where as far directing is on of important variables which sharing in density to increase all another offensive variables, and don't depend on the random and penetration which characteristic this standards.

suggestion is numerical formation in shap table for standards delimitation for men hand ball players according to his performance standards, and not according to the clubs standards.
