Research problem and its importance

The sport volleyball of mathematics which is characterized by the transition and the rapid shift from defense to attack and vice versa are characterized by the interaction constant for the positions of offensive and defensive throughout the game where the burden is greatest in the game on the process of behavior tactical (individual - group) during the responses to tactical which shows where the competition between thinking the player and his opponent think as it requires the speed of awareness of the relationship between the positions of different play and good disposition and the results of some studies indicate that there is a relationship between performance and tactical awareness of tactical situations

The computer programs used in analyzing the performance of the skill and tactical and Video recording which is an important way now to a qualitative analysis and quantitative to identify the level of mastery of the technical performance are registered prospective matches and watch them through the process of Almlain scientific inhalers to identify occurrences of performance skills and the degree of efficiency in the events and happenings matches team championships in volleyball

Targeted analytical studies in the field of team sports in general stand on the strengths and weaknesses in basic skills and tactical capabilities to take advantage of them in developing public policy and private develop and promote these sports and evaluate the performance of the players

Through the researcher to identify and analyze the previous studies and scientific references in volleyball was found that the attention of researchers has focused on the analysis of performance in general without enjoys the tactical (offensive - defensive) with the same interest which led to a lack of tactical nous which has not received their share of the attention of researchers so far Arab Republic of Egypt - to the knowledge of the researcher - although it represents an important aspect in the sport of volleyball final outcome of the various aspects (physical - skills - psychological) and crystallized in the form of one to win the match which led to the humility of scientific information on side tactical, where many of Almadrbi depends on personal experience and thinking, self-directed action during the tactical training and competition as it requires to play different positions during the competition some tactical automatic behaviors, and the other be mandatory based on prior preparation.

As well as through the exercise of the researcher the game to players, coaches and observation of the many games on the domestic and international levels found that there were some teams that are still using some configurations tactical (attack - defense), which may not affect the same configurations other to make the points and thus win the match, it was equally certain difference in

terms of the skill level of the game but there is an important aspect may be determined as a result of the match at the tactical (tactical), where the researcher finds that the distinction between winning team and the defeat of another may be due largely to the setting level tactical team and the ability of the players on the proper use of various forms of formations, tactical (attack - defense) and also by plans to play the individual through the well-behaved player chosen for a particular skill in a certain position where there are many formations formations, tactical (offensive - defensive innovative result of the impact of competition between the attackers and defenders, the amendment in the articles of law, development ways to play offensive and defensive, innovation and develop skills, different schools of volleyball in the world, the trend of scientific towards the analytical study art movement and health performance and the results of the application, which had an impact on the emergence of the problem to the researcher in his choice for the analysis of the effectiveness of performance tactical individual and collective, both defensive and offensive to some difference of during volleyball games competitive with the high level of a gel stand on what configurations tactical offensive and defensive individual or collective most commonly used and effective in scoring and earn the transmission and decide the outcome of the game and that may play an important role in the ranking of the teams competing in the championships, so we put between a Edina various forms of configurations tactical-effective, to be directing the setup tactical course of training, and performance tactical during the competition to the information tactical scientific far from the imagination of the coach, so have a direct contribution to the effectiveness of performance in the games in order to try to bring about the sports advanced in volleyball, The researcher hopes that the results of this study help to shed light on the true level of performance used by tactical players the difference in the games until the sample can be used in the future.

Research Obiectives:

- identify the skills and offensive types most commonly used and their effectiveness in the Kuwaiti national team matches during the Gulf Championship volleyball
- Identify methods of performance tactical offensive individual most frequently used and their effectiveness in the Kuwaiti national team matches during the Gulf Championship volleyball
- Identify methods of attacking collective tactical performance most commonly used and their effectiveness in the Kuwaiti national team matches during the Gulf Championship volleyball.

Research questions:

- What kinds of skills offensive and most commonly used and their effectiveness in the Kuwaiti national team matches during the Gulf Championship for volleyball?

- What methods of performance tactical offensive individual most frequently used and their effectiveness in the Kuwaiti national team matches during the Gulf Championship for volleyball?
- What methods of attacking collective tactical performance most commonly used and their effectiveness in the Kuwaiti national team matches during the Gulf Championship for volleyball?
- What is the relationship between the effectiveness of the methods of offensive skills and tactical offensive performance of individual and collective characteristic of the Kuwaiti national team during the Gulf Championship for volleyball?

Research Methodology

The researcher used the descriptive approach using surveys to its own characteristics

The research sample

Included a sample search on all the games the teams participating in the tournament eighth teams in men's volleyball Cooperation Council for the Arab Gulf States Oman (Muscat) from 8 - 12 17 2009 which was held under the auspices of the Omani's volleyball as they hit the sample 15 games of football plane chosen way intentional Participated in this session represented 6 countries of the GCC countries to the Arab Gulf States namely (Kuwait Oman Qatar Saudi Arabia United Arab Emirates - Bahrain)

Identify the research variables

Select the researcher selected research variables in terms of its kind according to the number of different considerations imposed by the theoretical framework of research

Methods of performance tactical offensive

- scroll offensive
- Transmission
- snike
- bulwark

Tactical performance of individual methods by using the scroll offensive skill

- scroll however one of the highest consistency
- scroll however one of the highest Balothb
- Hand scroll from the top of Stability
- Hand scroll from the top of Balothb
- scroll down Balsaedin

Methods of performance of individual tactical skill scroll offensive in its different forms according to the place of execution

- Center (1)
- Center (6)
- Center (5)
- Center (4)
- Center (3)
- Center (2)

Performance of tactical errors by using the individual offensive skill scroll offensive

- pass the ball outside the right side of the pitch
- pass the ball outside the left side of the pitch
- pass the ball out of the line end of the court
- pass the ball in the net
- touching the network when you pass the ball
- pass the ball in the bulwark
- error of law

Tactical performance of individual offensive skill transmission using

- Transmission of stability Altamoji
- Transmission of Altamoji jump
- Transmission overwhelming jump

Tactical performance of individual offensive skill using the transmission according to the place of execution

- the right side behind the line of the end of the pitch
- behind the center line of the end of the pitch
- the left side behind the line of the end of the pitch

Methods of individual offensive performance tactical skill by using the transmission according to curve the path of the ball sent to the court discount

- the path of high
- Average path
- the path of low

Means and instruments to collect data:

Researcher to use the means and tools to collect data in the following research: -

- substantive note:
- personal interview:
- video camera:
- Note forms for recording data:
- assess the effectiveness of tactical performance:

The baseline study:

The researcher filmed the matches in the sample period of 3 - 5/12/2009 m and the help of two professional videographers and previous training on the process of imaging through the survey

Conclusions:

1. Occupied the spike first order and second order transmission and block order in the third and scroll offensive ranking fourth and final performance of the total tactical offensive
2. Was the degree of effectiveness of the total tactical offensive performance as a whole during the Kuwait national team games in the tournament a value of 61.3%
3. Was the percentage of the use of skill scroll offensive however one of the highest consistency throughout the tournament Kuwait national team in the tournament value amounted to 100% of the total use of performance tactical offensive of the skill scroll offensive and therefore occupied a skill scroll offensive, however, one

of the highest consistency ranked fifth in percentage terms for the use of offensive skill scroll while the degree of effectiveness of the offensive skill scroll however one of the highest stability of a value of 16.7% and this occupied the skill ranked fifth in terms of effective implementation of the tactical performance of individual offensive skill scroll attacking various kinds

4. Occupied the skill scroll however one of the highest Balotheb during team play Kuwait the first place and came skill scroll from the bottom of Balsaedin second order and came skill scroll hands of the highest Balotheb in the third in terms of effective implementation of performance tactical individual offensive skill scroll attacking various kinds
5. Was the percentage of the use of skill scroll attacking from the center (1) during the matches Kuwait national team in the tournament value amounted to 11.9% of the total use of performance tactical offensive of the skill scroll offensive and therefore occupied a skill scroll attacking from the center (1) ranked fifth in percentage terms for the use of skill scroll attacking various types, according to the place of execution while the degree of effectiveness of the skill scroll attacking from the center (1) a value of 47.8% and this occupied the skill ranking third in terms of effective implementation of performance tactical individual offensive skill scroll attacking various types, according to the place of execution.
6. Recurrence of a legal error in the use of offensive skill scroll percentage reached 21.7% of the total error performance tactical offensive skill to scroll through the offensive team matches in the tournament.
7. Occupied skill Altmujy transmission of the first order jump in terms of effective implementation of the tactical performance of individual offensive skill transmission of various kinds.
8. Was the percentage of the use of skill transmission from the right side behind the line of the end of the pitch during the Kuwait national team games in the tournament in the first place in percentage terms for the use of skill transmission of various types, according to the place of execution skill transmission
9. Occupied the skill to send the ball stadium discount curve is the path of the average ranking first in terms of effective implementation of the tactical performance of individual offensive skill transmission of various types, according to curve the path of the ball sent to the stadium opponent.
10. Occupied skill directing the ball sent to the Centre (2) in the court of the opposing team ranking first in terms of effective implementation of the tactical performance of individual offensive skill to guide the ball sent to the six positions in the court of the opposing team.

11. Occupied skill directing the ball sent to the Centre prepared in the court of the opposing team ranking first in terms of effective implementation of the tactical performance of individual offensive skill transmission of different types according to the purpose of directing the ball towards the court sent the opponent.
12. Occupied the bulwark individual skill from the center (2) the first order in terms of effective implementation of the tactical performance of individual offensive skill bulwark of individual centers pitch the front three.
13. Occupied the skill block to face the onslaught of playmaker discount first order in terms of effective implementation of the tactical offensive performance of the skill block to meet the different types of attack.
14. Occupied skill bulwark duo first order in terms of effective implementation of the tactical offensive performance of the skill block to meet the different types of attack for the teams competing in the tournament.
15. And occupied the skill bulwark duo to face the onslaught of competition for players of the difference from the center (2) games during the Kuwait national team in the tournament to face the first order of the total percentage of the bulwark use the skill to cope with different types of attack for the teams competing in the tournament.
16. Was the percentage of use of the skill block to face the onslaught of players competing teams when he was a playmaker team Kuwait national team at the Center (2) during the tournament distributed on the outposts of the three (2,3, 4) to address the types of attack different players teams compete in the tournament to the values reached respectively 43%, 31%, 26%.
17. Reached the degree of effectiveness of the attack batsman to drop the ball as a method of performance tactical individual offensive games through Kuwait national team in the tournament value amounted to 71.1% and occupied the first place, followed by skill spike higher from the region background value of 70%, then skill spike rapidly in the third the value of 68.7%, and skill spike came from the medium setting in the fourth position in the value of 68.1%, respectively In the fifth skill spike came from the front area of higher value amounted to 67.8%.
18. Reached the degree of effectiveness of the total use of tactical methods of performance of individual offensive skill spike in its different forms 68.4%
19. Reached the degree of effectiveness of the total use of tactical methods of performance of individual offensive skill spike ,according to the direction of the attack, 68.4%
20. Reached the degree of effectiveness of the use of skill spike after the reception of transmissions as a method of performance tactical individual offensive skill spike,

according to the stage building and carry out the attack during the games Kuwait national team in the tournament value amounted to 69.6% and occupied the first place, followed by skill spike after the defense of the pitch value amounted to 67.7% , then skill spike after the reception of easy balls in the third value amounted to 65.2%

21. Reached the degree of effectiveness of the total use of tactical methods of performance of individual offensive skill spike, according to the building phase and the implementation of the attack, 68.4%
22. Reached the degree of effectiveness of the skill spike as a method of performance tactical individual attacking from the front part of center (2) value of 50.4% and ranked number five, while the degree of effectiveness of the skill spike as methods of performance tactical individual attacking from the front part of center (3) the value of 67%, and occupied the third place, while the degree of effectiveness of the skill spike as methods tactical individual offensive performance of the region from the center of the front (4) value of 74.3% and finished the first order
23. Reached the degree of effectiveness of the total use of tactical methods of performance of individual offensive skill spike, according to the area of the attack of the anterior 67%
24. Reached the degree of effectiveness of the total use of tactical methods of performance of individual offensive skill spike, according to the area of the attack from the back 69.5%
25. Reached the degree of effective utilization ratio and the degree of effectiveness and performance of tactical methods of arranging individual offensive skill to spike, according to the place and the direction of the attack to the center (6) in the court of the opposing team during the Kuwait national team games in the tournament a value of 701% occupied and the first order
26. Reached the degree of effective use of tactical methods of individual offensive performance of the skill spike, according to the number of players the opposing team based bulwark doubles matches during the Kuwait national team in the tournament a value of 70.3% achieving the first order
27. Reached a level where the effectiveness of total use and the degree of effectiveness and arrange methods of tactical performance of individual offensive skill spike, according to the number of players the opposing team based wall rollback value amounted to 68.4%
28. Was the degree of efficiency and the degree of effectiveness and arrange methods of performance tactical individual offensive skill spike, according to the way the striker with the players bulwark to the opposing team (beating at the hands of the bulwark and out) during

- the matches Kuwait national team in the tournament value amounted to 74.4% and occupied respectively the first
29. Reached a level where the effectiveness of total use and the degree of effectiveness and arrange methods of tactical performance of individual offensive skill spike, according to the way forward to deal with players bulwark to the opposing team value was 68.4%
 30. The recurrence of the performance of tactical errors by using the individual offensive skill spike in the attack in the block, occupied the first order. , Using the skill spike in the attack outside the stadium both sides of the second order. Using the skill spike in touching the top edge of the network during the attack ranked third. , Using the skill spike in the attack outside the line end of the court order in the fourth. And the use of skill spike in the middle of the pitch to cross the line fifth respectively. Using the skill spike in legal error in the sixth.
 31. Reached the degree of effectiveness of the methods of collective performance tactical offensive skill using the spike value amounted to 68.4%
 32. The percentage distribution of the attack, according to the Centers attack the front and rear on the pitch during the stages of the attack, the different is from the center (4) and all stages of the attack (after the defense, after receiving the transmitter, after receiving the balls easy) in the first place, followed by center (3) in second , center, followed by (2) in third place, followed by center (1) in the fourth position, followed by center (6) in the fifth arrangement.
 33. The percentage for the distribution of performance tactical collective offensive using the spike, according to the Centers attack the front and rear on the pitch and its relationship to the status of toy maker from the center (4) centers playmaker (Center 2, Center 3, Center 4, Center 6, Center 1) hitting percentage (54%, 45%, 46%, 56%, 54%, 61%) respectively by a total 53% occupied the first place, while his center playmaker from the center (3) second order, and occupied the center playmaker from the center (2') ranked third, also occupied the center of the toy maker Center (1) fourth position, and occupied the center of the toy maker Center (6) ranked fifth
 34. Percentage of points won and efficiency of the use of performance styles tactical offensive in the spike Ceuta percentage reached 34.7%, whereas in the defeat of 54.2% and achieving the degree of efficiency reached 77.8% and the degree of efficiency of -56.9 and occupied the first place, and the transmission in second, and block in the third, and scroll offensive in fourth position
 35. Scroll in the offensive team won the first order in Kuwait as a percentage amounted to 9.5%
 36. Transmitter in the Bahrain team won the first order as a percentage of 4.3%

37. Repelling the team won the first order in Kuwait as a percentage amounted to 17.9%
38. In a spike team won the United Arab Emirates rankings percentage amounted to 55.5%
39. Errors in the opponent team won the first order in Saudi Arabia as a percentage amounted to 27.4%
40. The sum total of the skills team won the Qatar order first the number of points was 475 points followed by Team Saudi Arabia in second place the number of points was 427 points and a team of Bahrain in the third the number of points was 423 points, then my team Kuwait and Oman in the fourth position in the number of points was 420 points, United Arab Emirates team then fifth in the number of points totaled \$ 393 points
41. There is a relationship between the effectiveness of the methods of offensive skills and tactical offensive performance of individual and collective characteristic of the Kuwaiti national team during the Gulf Championship volleyball.

5 / 2 Recommendations:

1. Interest in specialized exercises, which lead to the development of tactical performance of individual and collective, both defensive and offensive play through the positions
2. Interest in the analysis of international matches and the World and Continental could even stand up to new development in the level of performance and tactical offensive and defensive Skill
3. Conduct similar studies at the World Championships team, which participates in Kuwait Volleyball
4. To disseminate awareness of the professional trainers through the horrible results of analytical studies for the International Championships in the field of volleyball
