Chapter (1)

Introduction

1.1. Definition of corrosion	1
1.2. Corrosion behavior of zinc in aqueous environment	1
1.2.1. What is zinc ?	1
1.2.1.1. General properties	1
1.2.1.2. Zinc protects steel in two ways	2
1.2.1.3. Zinc corrosion is controlled by four factors	2
1.3. Classification of corrosion	3
1.3.1. Various forms of corrosion	4
1.3.1.1. General corrosion or uuniform attack	4
1.3.1.2. Pitting or localized attack	4
1.3.1.3. Galvanic corrosion	4
1.3.1.4. Crevice corrosion	5
1.3.1.5. Stress corrosion	5
1.3.1.6. Erosion – corrosion	5
1.3.1.7. Fretting corrosion	5
1.3.1.8. Filiform corrosion	5
1.4. Corrosion inhibitors	6

1.4.1 Definition	6
1.4.2. Classification of corrosion inhibitors	6
1.4.3. Corrosion rate measurements	7
1.4.3.1. Chemical method	7
i) Weight-loss measurements	7
ii) Hydrogen evolution method	7
iii) Thermometric method	8
1.4.3.2. Electrochemical methods	8
i) Open-circuit potential method	8
ii) Potentiodynamic polarization method	9
a) Tafel plots	9
b) Linear polarization method	9
iii) Impedance method	10
a) The Nyquist plot	11
b) Bode plot	12
iv) Electrochemical frequency modulation method	13
1.5. Literature survey on corrosion inhibition of zinc in aqueous solutions	14
Aim of the present work	59

Chapter (2)

Experimental

2.1. Composition of material samples	61
2.2. Test Specimens and Treatment	61
2.2.1. Weight - loss measurements	61
2.2.2. Electrochemical measurements	62

2.3. Materials and Solutions	62
2.3.1. Hydrochloric acid	62
2.3.2. Organic additives	63
2.3.3. Inorganic additives	64
2.4. Experimental Techniques	64
2.4.1. Weight-loss measurements	64
2.4.2. Electrochemical Techniques	65
2.4.2.1. Potentiodynamic polarization	65
2.4.2.2. Electrochemical impedance technique	66
2.4.2.3. Electrochemical modulation frequency technique	66
2.5. Determination of Inhibition Efficiency	66
2.5.1. Calculation of corrosion current (Tafel line extrapolation)	66
2.6. Calculation of the Degree of Surface Coverage	67
2.6.1. Using polarization method	67
2.6.2. Using weight-loss method	69

Chapter (3)

Results and discussion

Section (A) : Study the corrosion behavior of Zn corrosion by chemical method.	72
3.1. Chemical Techniques	72
3.1.1. Effect of inhibitor concentrations	72
3.1.2. Adsorption isotherm	78
3.1.3 Effect of temperature	86
3.1.4. Synergistic effect	106
Section (B): Study the corrosion of Zn by potentiodynamic method.	119

3.2.1. Tafel method	119
3.2.2. Adsorption isotherm	130
3.2.3 Pitting corrosion of zinc electrode and its inhibition	132
3.2.3.1 Effect of NaCl concentration	132
3.2.3.2 Effect of Scanning rate	134
3.2.3.3 Effect of addition of tetrahydrocarbazole derivatives on the potentiodynamic anodic polarization curves of zinc electrode in 0.1M NaCl	135
Section (C): Study the corrosion of Zn by Electrochemical Impedance Spectroscopy Technique (EIS)	143
Section (D): Study the corrosion of Zn by Electrochemical modulation frequency technique	152
Section (E): Study the corrosion of Zn by Quantum Chemical Studies (Computational Study)	163
Section (F): Mechanism of inhibition	171
Summary	174
Refernces	178
