TABLE OF CONTENTS

CHAPTER 1……1

INTRODUCTION…..……..... 1

1.1 Background……1

1.2 Relevance ……. 1

1.3 Objective and scope……... 4

1.4 Outline of the thesis……... 5

CHAPTER 2…….. 6

LATERATURE REVIEW ……6

2.1 General…….. 6

2.2 Historical work……...6

2.3 Dynamic analysis of wind force…….7

2.4 Pressure measurements system…….…….... 15

2.5 Full scale measurements …….…….…..... 16

2.6 Analytical work ……..…16

2.7 Numerical work……..25

CHAPTER 3……..…..…. 29

NUMERICAL MODELING AND EXPRIMENTAL VALIDATION……... 29

3.1 General…..……29

3.2 Rolex tower case study……..…30

3.2.1 Characteristics of the Rolex tower building…….…….30

3.2.2 Experimental test description and results of the Rolex tower building ……...……34

3.2.2.1 Study model and Surrounding …….....34

3.2.3.2 Upwind Profiles …….……34

3.2.3.3 Wind climate …….…….34

3.2.3.4 Methodology …….…….35

3.2.3.5 The experimental along-wind-induced loads…….…….38

3.2.3 Numerical model description and results of the Rolex tower building….....42

3.2.3.1 Theoretical background……..……42

3.2.3.2 Computational domain and mesh arrangement…….43
3.2.3.3 Boundary conditions…….....47
3.2.3.3.1 Velocity profile in the inlet.……47
3.2.3.3.2 Turbulence intensity.……..…….…49
3.2.3.4 Turbulence model…….....49
3.2.3.5 Numerical test duration and time steps …….49
3.2.3.6. Results and post-test analysis ……...50
3.2.3.6.1 Results for wind in X-direction……...……50
3.2.3.6.1.1 Display of velocity values and stream lines for wind in X-direction……50
3.2.3.6.1.2 Display of time histories of force and moment at base for wind in X-direction …….50
3.2.3.6.2 Results for wind in Y-direction……...……54
3.2.3.6.2.1 Display of velocity values and stream lines for wind in Y-direction……54
3.2.3.6.2.2 Display of time histories of force and moment at base for wind in Y-direction …….54
3.2.3.6.3 The post-test analysis of the integrated forces and moments obtained from the CFD model……..…….……58
3.2.3.6.3.1 Theoretical background…….…..58
3.2.3.6.3.2 Sample of calculations of the peak force Fx(max)at Z=H ……...64
3.2.3.6.3.3 Sample of calculations of the peak force Fy(max)at Z=H ……...73
3.2.4 Analytical analysis calculations and results of the Rolex tower building…….82
3.2.4.1 General……....82
3.2.4.2 Analytical analysis calculations and results of the Rolex tower building according to ASCE7-2005…….…….....82
3.2.4.3 Analytical analysis calculations and results of the Rolex tower building according to NBC-2005…….…….....93
3.2.4.4 Analytical analysis calculations and results of the Rolex tower building

according to AS/NZS1170.2-2002…….....101

3.2.4.5 Analytical analysis calculations and results of the Rolex tower building according to ECP 201-2008…….....109

3.2.5. Comparative study between experimental, numerical, and analytical results of the Rolex tower building……..……..……117

CHAPTER 4……..…….…….. 123

PARAMETRIC STUDY……..123

4.1 General…...…….123

4.2 Unchanged parameters…...…….123

4.3 Studied parameters…...……..…….124

4.4 Results and discussions…….……..……126

4.4.1 Effect of Fundamental Period (T) in percent of difference (P.O.D.) between numerical model and ASCE7-2005 evaluated base shear and overturning moment ……..…..……131

4.4.1.1 Comments on results of effect of Fundamental Period (T) on P.O.D.....138

4.4.2 Effect of plan aspect ratio (B/L) in percent of difference (P.O.D.) between numerical model and ASCE7-2005 evaluated base shear and overturning moment ……..…..……139

4.4.2.1 Comments on results of effect of plan aspect ratio (B/L) on P.O.D.....143

4.4.3 Effect of building height (H) in percent of difference (P.O.D.) between numerical model and ASCE7-2005 evaluated base shear and overturning moment ……..…..……144

4.4.3.1 Comments on results of effect of building height (H) on P.O.D.....148

4.4.4 Effect of terrain roughness in percent of difference (P.O.D.) between numerical model and ASCE7-2005 evaluated base shear and overturning moment ……..…..……149

4.4.4.1 Comments on results of effect of terrain roughness on P.O.D.....156

CHAPTER 5…….157
SUMMARY AND CONCLUSIONS……..157
5.1 Summary……157
5.2 Conclusions……158
5.3 Recommendations for Future Research…….159

REFERENCES……161
APPENDIX A…….…167
DETAILED RESULTS OF PARAMITRIC STUDY CASES.....……..167

LIST OF FIGURES

Figure 1.1 Along and Across Wind Actions…….…...…...2
Figure 2.1 Schematic of a typical open-circuit wind tunnel ……..…..8
Figure 2.2 Simple stick aero elastic model ……....…....9
Figure 2.3 An aero elastic model with provisions for simulating torsion …….....10
