Introduction	1
Literature Review	3
Radiation	3
Radiation units	4
Radiation sources used for food irradiation	5
Dose survival curves	5
Radiation decimal reduction dose (D_{10} -value)	7
Practical application of food irradiation	8
Advantages of radiation treatment	9
Safety and wholesomeness of irradiated foods	11
Action of ionizing radiation on microorganisms	11
Target theory	15
Relative radiation-resistance of microorganisms	16
Relative radiation-resistance of fungi	17
Factors influencing radiation resistance of microorganisms	23
Effect of ionizing radiation on fungal cell contents	27
Role of cellular structure and intracellular constituents in radiation resistance	33
Materials and Methods	40
Source of fungal isolates	40
Isolation, purification and identification of fungi	40
Preparation of spore suspension	40
Measuring the fungal growth diameter	41
Determination of decimal reduction dose (D_{10} -value)	41
Irradiation process	43
Mycelium dry weight (biomass)	43

Determination of some cellular components	43
Total proteins.....	43
Amino acids	44
Total lipids	44
Fatty acids	44
Nucleic acids	45
Artificial fungal contamination	46
Total fungal count	47
Results	48
Fungal isolation	48
Effect of gamma irradiation on the growth diameter of the selected fungal isolates	50
Identification of the selected fugal isolates	59
Effect of gamma irradiation on the biomass of the selected strains	59
Determination of the decimal reduction dose (D_{10} -value) of the selected strains	67
Cellular composition of radiation resistant and sensitive fungal species	80
Total proteins.....	80
Amino acids	80
Total lipids	91
Fatty acids	91
Nucleic acids	96
Effect of gamma irradiation on some cellular composition of resistant and sensitive species	99
Total proteins.....	99
Amino acids	101

Nucleic acids	116
Effect of gamma irradiation on the survival count of the tested resistant fungal species artificially inoculated into lupine seeds or chicken feed during storage	118
Discussion	126
Conclusion	146
Summary	147
References	152
Arabic Summary
