

CONTENTS

	Page
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	3
2.1. Mineral fertilizers	4
2.2. Biofertilizers	6
2.2.1. Nitrogen (N ₂) fixers	6
2.2.2. Phosphate solubilizing microorganisms	15
2.3. Chemical composition of wheat grains	19
2.3.1. Protein and amino acids of wheat grains	20
2.4. Chemical composition of soybean seeds	22
2.4.1. Fatty acids composition of soybean oil	23
2.4.2. Electrophoresis of soybean protein	25
MATERIAL AND METHODS	28
3.1. Field experiments	28
3.1.1. Mineral fertilizers	28
3.1.2. Biofertilizers	28
3.1.3. Experimental design	29
3.1.4. Experimental technique	29
3.1.5. Biofertilizers inoculation	29
3.1.6. Wheat treatments	30
3.1.7. Soybean treatments	30
3.1.8. Cultural practices	31
3.1.9. Growth and yield characteristics	31
3.2. Statistical analysis	33
3.3. Chemical analysis	33
3.3.3. Carbohydrates	33
3.3.11. Soil analysis	38

4. RESULTS AND DISCUSSION	
4.1. Growth parameters and N, P and K uptake of wheat plants	41
4.1.1. Effect of biofertilizers and mineral fertilizers on growth parameters of wheat plants	41
4.1.2. Effect of mineral nitrogen fertilizer, inoculation with nitrogen fixers or interaction between mineral nitrogen fertilization inoculant on N, P and K concentration and uptake by wheat plant	56
4.1.3. Chemical composition of wheat grains	69
4.1.4. Follow-up of total nitrogen and available P and K of the wheat-cultivated soil due to fertilization	74
4.2. Growth parameters and N, P and K uptake of soybean plants	78
4.2.1. Effect of biofertilizers and mineral fertilizers on growth parameters of soybean plants	78
4.2.2. Concentration and uptake of N, P and K by soybean plant as influenced by phosphatic fertilization	91
4.2.3. Chemical composition of soybean seeds	103
4.2.4. Follow-up of total nitrogen and available P and K of the soybean-cultivated	123
