INTRODUCTION	1
REVIEW OF LITERATURE	4
MATERIALS AND METHODS	33
EXPERIMENTAL RESULTS:	54
Symptoms and effects	54
Identification of the causal organism.....	58
Pathogenicity tests:	59
On detached leaves	59
On fruits	63
Morbid anatomy	68
Effect of inoculum density on disease deve- lopment.....	68
Relative susceptibility of some apple variet- ies to infection with <i>V. inaequalis</i>	70
Host range	72
Pure Culture Studies	76
Effect of different media	76
a- In liquid media	78
b- On solid media	78
Effect of leaf extracts of some rosace- ous plants on growth rate.....	81
Effect of temperature	84
Utilization of carbon sources.....	87
Utilization of nitrogen sources.....	90
Effect of amino acids on linear growth..	93
Effect of relative humidity.....	95
Effect of Hydrogen-ion concentration on the fungal growth of <i>V. inaequalis</i>	98
Factors affecting sporulation of <i>V.</i> <i>inaequalis</i>	101
1- Effect of temperature and incuba- tion period	101

	Page
2- Effect of inoculum types.....	103
3- Effect of different media	105
4- Effect of media containing different parts of apple host.....	108
5- Effect of media containing different concentration of Fe SO ₄	111
6- Effect of amino and organic acids.....	113
7- Effect of different sucrose concentrations	115
Overwintering of <u>V. inaequalis</u>	117
Host-parasite relationship :	121
Effect of leaf-leachates	121
Antagonistic effect of leaf-surface microflora on conidial germination.....	122
DISCUSSION	128
SUMMARY	142
REFERENCES	148
ARABIC SUMMARY.
