

CONTENTS

1 - Introduction	1
2 - Review of Literature	2
2-1 The importance of drainage	2
2-2 Factors affecting water table level	5
2-3 Hydraulic conductivity	7
3-3-1 Factors affecting hydraulic conductivity	8
A - Soil texture	8
B - Soil salinity and alkalinity	11
2-4 Design of drainage system	13
2-4-1 Drainage criteria	13
2-4-2 Equations for designing drainage system ..	17
A - General aspects	17
B - Theories of design drainage system ...	18
C - Equations for design drainage system..	20
(1) Steady state equations	20
(2) Nonsteady-state drainage equations ..	23
2-5 Tile drainage in relation to crop performance...	27
2-5-1 Yield	27
2-5-2 Plant growth	29
2-6 Subsurface drainage techniques and pipe materials.	31
2-6-1 Types of pipe drains	31
I . Clay and concrete pipes	31
II . Plastic pipes	32
2-6-2 Envelope materials	35

II

3 - Materials and methods	38
3-1 Location.....	38
3-2 Flow equations used for calculation of drain spacing	38
3-3 The network of drainage system	39
3-3-1 Laterals	39
3-3-2 Collectors	41
3-3-3 Manholes	41
3-4 The experimental field and soil sampling	42
3-4-1 Experimental field	42
3-4-2 Soil sampling	42
3-5 Piezometers and water table measurements.....	44
3-5-1 Installation of piezometers	44
3-5-2 Location of piezometers	45
3-5-3 Measurement of piezometers heads.....	45
3-6 Measurement of rate of discharge	46
3-7 Crop rotation and assessment of crop performance.....	46
3-7-1 Crop rotation	46
3-7-2 Crop performance	46
3-8 Methods of analysis	47
3-8-1 Hydraulic properties	47
3-8-2 Physical properties	48
3-8-3 Chemical properties	48
4 - Results and discussion	50
4-1 Main soil properties in the initial stage	50
4-1-1 Physical properties	50
I . Soil texture	50
II . Soil bulk density	52
III . Soil moisture	53
IV . Soil porosity	54
