INTRODUCTION	1
CHAPTER I : ABSORPTION CROSS-SECTION OF ELECTRIC DIPOLE GAMMA-QUANTA	6
CHAPTER II : THE CONSTRUCTION OF NUCLEAR DIPOLE STATES	
II.1 One particle-one hole approximation	14
II.2 The one-phonon approximation	20
II.3 The two-phonon approximation	24
CHAPTER III : NUMERICAL CALCULATIONS	
III.1 The giant dipole resonance in the one particle-one hole approximation	27
III.2 The giant dipole resonance in one- phonon approximation (2^+)	34
III.3 The giant dipole resonance in the two- phonon approximation (2^+)	40
CONCLUSIONS	43
APPENDICES	
A The transition matrix element of dipole operator	44
B Wick's theorem	46
C The particle-hole matrix element	50
D The interaction operator between the nucleons and the phonon field	52
E The matrix element of interaction between the nucleons and the quadrupole phonon	54
F The secular matrices for the $E1, T = 1$ states in Si^{28}	57
G The computer program	60
REFERENCES	62
