Subject	Page
CHAPTER 1: INTRODUCTION	
1.1. Literature survey on azo dye and Schiff base compounds	1
<i>1.1.1. Literature survey on azo dye compounds</i>	<i>1</i>
<i>1.1.2. Literature survey on Schiff base compounds</i>	<i>2</i>
1.2. Electroanalytical methods	3
<i>1.2.1. Literature survey on conductimetric and potentiometric Studies</i>	<i>3</i>
<i>1.2.2. Literature survey on voltammetric studies of azo dye compounds</i>	<i>7</i>
<i>1.2.3. Literature survey on voltammetric studies of Schiff base compounds and its complexes</i>	<i>10</i>
1.3. Literature survey on spectrophotometric determination of the metal ions under consideration	13
1.4. Literature survey on solid chelates	29
CHAPTER (II): EXPERIMENTAL	
2.1. Preparation of organic ligands	36
2.2. Preparation of the solutions for electronic absorption spectra of free ligands and the working procedure	41
2.3. Preparation of solutions for conductimetric measurements and the working procedure	42
2.4. Preparation of solutions for potentiometric measurements and the working procedure	43

2.5. Preparation of solutions for voltammetric measurements and the working procedure	45
2.6. Preparation of solutions for spectral measurements and the working procedure	46
2.7. Spectrophotometric determination of the metal ions	50
2.8. Preparation of the solid chelates	51
2.8.1. <i>Chemical analysis of the solid chelates</i>	51
2.8.2. <i>Determination of alcohol and water molecules in the solid chelates</i>	52
2.8.3. <i>Infrared spectra of the solid chelates</i>	52
2.8.4. <i>Electronic absorption spectra of the solid chelates</i>	53

CHAPTER (III) THE SPECTRAL AND VOLTAMMETRIC CHARACTERISATION OF THE ORGANIC LIGANDS

3.1. The electronic absorption spectra of the azo dyes and Schiff base compounds in different organic solvents	54
3.1.1. <i>The electronic absorption spectra of the azo dyes in ethanol...</i>	55
3.1.2. <i>The electronic absorption spectra of the Schiff bases in ethanol</i>	56
3.2. The electronic absorption spectra of the azo compounds under investigation in different organic solvents	57
3.3. The electronic absorption spectra of the Schiff base compounds under investigation in different organic solvents	58
3.4. The spectral behavior of the ligands under consideration in buffer solutions and the determination of their ionisation constants	63
3.5. Infrared spectra of the free azo dye and Schiff base Compounds	72
3.5.1. <i>Infrared spectra of the azo dye compounds</i>	72

3.5.2. Infrared spectra of the Schiff base compounds	72
3.6. ¹H-NMR spectra of the ligands under consideration	74
3.6.1. ¹ H-NMR spectra of the azo dye compounds	75
3.6.2. ¹ H-NMR spectra of the Schiff base compounds	75
3.7. Cyclic voltammetry of free ligands	77
3.7.1. Cyclic voltammetry behavior of ligands I _a and I _c	77
3.7.2. Cyclic voltammetry behavior of ligands II _a and II _b	79

CHAPTER (IV): STUDIES OF THE COMPLEXES IN SOLUTION

4.1. Conductimetric titrations	80
4.2. Potentiometric titrations	83
4.3. Voltammetric studies of metal complexes	91
4.4. Spectrophotometric studies of metal complexes in solution	93

CHAPTER (V): STUDIES OF THE SOLID COMPLEXES

5.1. Analysis of solid complexes	147
5.1.1. Elemental analysis	147
5.1.2. Molar conductivities	147
5.2. Thermogravimetric and differential thermal analyses of some metal chelates	152
5.3. Infrared absorption spectra of metal chelate with the ligands under consideration	170
5.4. ¹H-NMR spectra of some complexes formed between ligand I_a and metal ions	180
5.5. Electronic spectra	183
General discussion	189
Summary	193
References	195
Arabic summary
