CHAPTER-1 *INTRODUCTION*

1.1 General -----	1
1.2 Ion Chromatography-----	2
1.2.1 Historical aspects -----	2
1.2.2 Factors affecting ion chromatographic separation-----	4
1.2.3 Literature survey for the determination of common anions, cations and heavy metal ions -----	6
i- common anions and cations-----	6
ii- heavy metal ions -----	9
1.3 Naturally occurring radionuclides -----	17
1.3.1 Natural radioactive decay series -----	17
1.3.2 Radionuclides formed through cosmic radiations -----	19
1.3.3 Other long-lived naturally occurring radionuclides -----	20
1.4 Sources and the global cycle of radium -----	20
1.4.1 Distribution behaviour of radium in drinking water -----	21
i- surface water -----	22
ii- ground water -----	23
1.5 Literature survey of the determination of naturally occurring radionuclides in drinking water -----	25
1.6 Aim of work -----	32

CHAPTER-2 *EXPERIMENTAL*

2.1 Chemicals and radioactive standards-----	34
2.1.1 Chemicals -----	34

2.1.2	Special chemicals -----	35
2.1.3	Radioactive tracers and standards -----	35
2.2	Test samples -----	36
2.2.1	Types and location of origin-----	36
2.2.2	Physical characterization-----	38
	i- pH measurements -----	39
	ii- total alkalinity-----	39
	iii- conductivity measurements-----	39
	iv- determination of total dissolved solids (TDS) -----	39
2.3	Analysis by ion chromatography-----	40
2.3.1	System used-----	40
	i- advanced gradient pump (AGP)-----	41
	ii- injection valve -----	41
	iii- ion-exchange columns -----	41
	a- for interseparation of chlorides and sulfates -----	41
	b- for interseparation of alkali and alkaline earth metal ions -----	42
	c- for interseparation of heavy metal ions -----	42
	iv- detectors -----	43
	a- conductivity detector -----	43
	b- anion self-regenerating suppressor (ASRS)-----	43
	c- cation self-regenerating suppressor (CSRS) -----	44
	d- variable wavelength detector-----	44
2.3.2	Common analytical procedures -----	45
	i- determination of chlorides and sulfates -----	45
	ii- determination of alkali and alkaline earth metal ions-----	48
2.3.3	Chromatographic separation and determination of heavy metal ions-----	51
	i- effect of pH -----	51
	ii- effect of eluent concentration-----	52
	iii- effect of eluent flow rate-----	52
	iv- determination of heavy metals in drinking water-----	53
2.4	Nuclear spectroscopic measurements -----	55
2.4.1	γ -Spectroscopic measurements-----	55
	i- instrumentation -----	55
	ii- calibration of the working system -----	56

a- energy calibration -----	56
b- efficiency calibration -----	57
iii- correction for external background-----	58
iv- method of calculation -----	59
v- determination of uranium and thorium radioactivity levels in drinking water by non-destructive method-----	59
2.4.2 Liquid scintillation counting (LSC) -----	60
i- instrumentation -----	60
ii- calibration of working system -----	61
a- optimization of the counting region -----	61
b- choice of suitable cocktail -----	62
iii- alpha/beta discrimination -----	63
iv- counting efficiency for radium-226 and radium-228 measurement-----	64
v- method of calculation -----	64
vi- separation and determination of radium-226 and radium-228 in drinking water -----	65

CHAPTER-3

RESULTS AND DISCUSSION

3.1 Characterization of drinking water -----	69
3.1.1 Physical characterization -----	69
i- pH value and related alkalinity -----	69
ii- electrical conductivity (EC) -----	71
iii- total dissolved solids (TDS)-----	72
3.1.2 Chemical analysis-----	75
i- determination of chlorides and sulfates -----	75
ii- determination of alkali and alkaline earth metal ions-----	78
3.2 Ion chromatographic separation of heavy metal ions -----	85
3.2.1 Effect of eluent pH -----	86
3.2.2 Effect of eluent concentration-----	89
i- retention factor (k') -----	89
ii- number of theoretical plates (N)-----	97
3.2.3 Effect of eluent flow rate -----	98
i- retention factor (k') -----	98
ii- number of theoretical plates (N)-----	98
3.2.4 Optimum conditions for the separation of heavy metal ions-----	110
