LIST OF TABLES

- Table 1 : Characteristic features of the isolated organism as *Pseudomonas pyocyanea*.
- Table 2 : Effect of MNNG on *Pseudomonas pyocyanea* using different concentrations at different periods of incubation.
- Table 3 : The activity of Acriflavine on *Pseudomonas pyocyanea* suspension at different concentrations.
- Table 4 : Characterization of MNNG induced mutants and their frequencies.
- Table 5 : Comparative studies between *Pseudomonas* and different types of mutants.
- Table 6 : Antibiotic sensitivity of the wild strain and of the different mutants.

LIST OF FIGURES

Figure (1) Shows the lethal effect of 1,25 and 2.5 mg MNNG/5 ml suspension of the organism.

Plate 1 : Showing that the auxotrophic mutant are those which are unable to grow on MM and have the ability to grow normally on CM.

Plate 2 : Showing the characterization of 5 thyronine mutants which are unable to grow on MM but were able to grow on media containing thyronine

Plate 3 : Showing the characterization of 6 arginine mutants which are unable to grow on MM but were able to grow on media containing arginine.

Plate 4 : Showing the characterization of 5 histidine mutants which are unable to grow on MM but were able to grow on media containing histidine.

Plate 5 : Showing the characterization of 1 glycine mutant which is unable to grow on MM but was able to grow on media containing glycine.

Plate 6 : Showing the characterization of 1 tryptophan mutant which is unable to grow on MM but was able to grow on media containing tryptophan.

Plate 7 : Showing the characterization of 1 cystine mutant which is unable to grow on M.M. but was able to grow on media containing cystine

Plate 8 : Showing the characterization of 2 asparagine mutants which are unable to grow on MM were able to grow on media containning asparagine.

Plate 9 : Showing the characterization of 2 isoleucine mutants which are unable to grow on MM but were able to grow on media containing isoleucine.

Plate 10: Showing no characterized adenine mutants which were unable to grow on MM or media containing adenine.
