

LIST OF CONTENTS

	Page
Part 1. INTRODUCTION & AIM OF WORK .	1
Part 2. REVIEW OF LITERATURE :	
Family Pseudomonadaceae.	9
Genus Pseudomonas:	9
Classification	11
Fluorescent Pseudomonas:	12
I. Morphology	12
II. Cultural characters	13
III. Extracellular enzymes and toxins	15
IV. Pathogenicity	17
V. Host defenses against Pseudomonas	19
VI. Antigenic structures	20
VII. Genetics	21
VIII. Antimicrobial susceptibility	25
Antibiotics resistance in Pseudomonas aeruginosa	32
Treatment and control of Pseudomonas aeruginosa:	36
I. Combined therapy	38
II. Immunotherapy	41
III. Phage therapy	43
Aminoglycosides therapy for Ps. aeruginosa infection	45
Nature of aminoglycosides resistance in Pseudomonas aeruginosa	54
Quinolones	56
IX. Plasmids	58
Introduction	58
Basic function of plasmids	60
Bacterial properties specified by plasmid determinants	63
Plasmids and the survival of bacteria	70
Curing of R-plasmids	72

Part III. MATERIALS AND METHODS

1. Materials:	77
a. Strains	77
b. Media	77
c. Antibiotics	79
d. Antibiotics sensitivity discs	79
e. Chemicals & Reagents	80
2. Methods:	81
- Isolation and Identification of <i>Pseudomonas aeruginosa</i>	81
- Antibiotic sensitivity test	81
- Determination of MIC of different antibiotics	83
- Mode of inheritance of antibiotic resistance	84
- Plasmid Isolation	84
- Determination of DNA concentration and purity	85
- The relationship between the existence and number of temperate Phages in lysogenic bacterial cells and the level of antibiotic resistance.	86
- Transformation	87
- Estimation of plasmid numbers	88
- Plasmid curing	89

Part IV. RESULTS	91
------------------	----

Part V. DISCUSSION	140
--------------------	-----

Part VI. SUMMARY	157
------------------	-----

Part VII. REFERENCES	161
----------------------	-----

Part VIII. ARABIC SUMMARY	
---------------------------	--
