

RESULTS TABLE

<i>No.</i>	<i>Substance of tab.</i>	<i>Page</i>
tab 1.	Weight, sex and estimated gestational age among patient, and controls.	87
tab 2.	Prenatal data of patients (N.24)	88
tab 3.	Fetal presentation in vaginal deliveries among patients and controls.	89
tab 4.	Mode of delivery in control and patients groups.	90
tab 5.	Apgar score among patients and controls.	90
tab 6.	Correlation between the degree of respiratory depression and the Apgar score at 1 minute and 5 minutes in patients group (N.24)	91
tab 7.	Discription of placenta in patients group (N. 24)	91
tab 8.	Meconium staining among patients and controls.	92
tab 9.	Frequency distribution of clinical findings in patients (N. 24).	93
tab 10.	Primary examination of neurological system of patients.	94
tab 11.	Primary examination of the color of skin of patients and controls at birth.	95
tab 12.	Laboratory investigation of serum of the controls patients.	96
tab 13.	Urinary laboratory investigation of patients and controls.	97
tab 14.	Relation between Apgar score at I minute and laboratory findings in patients (N.24) in relation to rispiratory depression.	98
tab 15.	Relation between Apgar score at 5 minute and laboratory findings in patients (N. 24) in relation to rispiratory depression.	99
tab 16.	Comparison between urinary B2 micro globalin and serum creatinine	100
